Timeless Veterinary Systems Inc. Launches Advanced Telemedicine Platform For Veterinary Radiologists

*Timeless Veterinary Systems Inc.* introduces a highly customizable teleradiology platform designed to empower veterinary radiologists with an affordable first-class system to manage their entire online consulting service

(PRWEB) May 01, 2013 -- Charlottetown, PEI, Canada: Timeless Veterinary Systems Inc., engineers of web applications for veterinary health care, recently announced the release of their latest innovation in a growing line of premium veterinary technologies. The Timeless Case Management System™ is a cloud-based teleradiology platform designed to simplify the entire referral process from start to finish for both radiologists and their referring clients. The new platform is extremely customizable to empower independent consultants with an affordable first-class system, but also powerful enough to manage a global network of radiologists.

According to Joey Seaman, VP of Timeless Veterinary Systems Inc., an enormous amount of consideration and consultation went into the design and development of their latest product. “We spent a lot of time talking to radiologists who were all saying the same thing – that the systems they were using were good, but not great. So what we did was create a radiologist’s wish-list and started getting to work on a teleradiology platform that would exceed everyone’s expectations.”

Aside from its remarkably clean and simple design, the most impressive quality may be the radiologist’s ability to fully configure the RIS based on personal preferences, including design and branding. Maritime Veterinary Imaging is the first radiology group to receive their customized Case Management System. “We decided to go with Timeless for many reasons,” said Paul Rist, DVM, DACVR, owner of MVI. “The engineers at Timeless were great to work with every step of the way to deliver a system that was customized to our needs. The product’s features and cost were compelling and it’s just what my company was looking for to take our business to the next level.”

Among its many time saving features, the platform has a slick PACS interface for clinics to easily DICOM-Send any modality directly to the Timeless Case Management System™ from their DR Workstation. In turn, radiologists can seamlessly DICOM-Send the images into their preferred viewer. The cloud-based system allows users access from anywhere and on any device; PC, laptop, tablet or smartphone. The system also includes a scheduler for managing multiple team members and appointments. To top it all off, the built in financial management feature saves countless hours by automatically invoicing, processing online payments, delivering detailed financial statements, and depositing directly into a specified bank account.

Following their initial release, Timeless doesn’t appear to be slowing down as they continue to deliver free updates to their customers as new features are developed. “There are some major advantages to being a small gritty company,” says Joey Seaman. “We typically move a lot faster than some of the big players and we work extremely hard to develop close relationships with our customers, because their success is our success.”

Timeless currently offers free online demonstrations of their Case Management System™. Those interested can visit [www.TimelessVeterinary.com](http://www.TimelessVeterinary.com) or contact Joey Seaman directly at JSeaman(at)TimelessVeterinary(dot)com or (902) 367-3480 x 7038.

Timeless Veterinary Systems Inc. is part of the Timeless Group of Companies, a software development firm located in Charlottetown, PEI, with over 15 years of experience developing advanced medical technologies.
