TodaysWirelessWorld.com Releases List of Top 100 Wireless Technology Experts for 2014

Meet the Wireless Wavemakers™—Today’s Thought Leaders, Innovators, and Influencers Who Are Shaping Tomorrow’s Wireless World

Dallas, TX (PRWEB) April 10, 2014 -- TodaysWirelessWorld.com today announced the release of its Top 100 Wireless Technology Experts list for 2014. This special feature is the first of an annual three-part series, which also will highlight the Top 100 Wireless Technology Providers and the Top 100 Wireless Technology Resources later this year. These lists serve as valuable guides for those who want greater insight into wireless communications technology.

The editors for TodaysWirelessWorld.com compiled this first list by searching for technology innovators and business leaders all across the wireless ecosystem, from two-way radios, phones, broadband cards, and other handheld devices and accessories to WLANs, mesh broadband networks, and other systems, solutions, software, and apps—and virtually everything in between. The burgeoning areas of the “Internet of Things” (IoT) and “Machine-to-Machine” (M2M) communications were researched as well. The editors then conducted interviews with industry sources to refine and vet the list to best reflect an elite group of Wireless Wavemakers™ who:

- Are technology drivers and thought leaders in their given area of focus and have demonstrated extensive expertise
- Offer dynamic and innovative solutions to address various wireless technology challenges
- Contribute their skills to an important/impactful organization within the wireless industry
- Influence the future development of wireless technologies

“Our list represents a wide range of leaders and innovators,” said Clay Zeigler, Editor of TodaysWirelessWorld.com. “It showcases individuals from large and small organizations as varied as Motorola Solutions, FierceWireless, Mobiquity, and Enterprise Wireless Alliance. The list also goes beyond manufacturers, advisory firms, consultants, and associations to spotlight impactful individuals from several leading academic and research institutions such as Stanford University, NYU, and the University of Texas, as well as noted authors like Stan Gibilisco and Ira Brodsky.”

With this list, TodaysWirelessWorld.com continues to position itself as the leading resource for people interested in the latest news and information about commercial-grade wireless technology.
