

22Moo Releases Bluetooth A2DP Wireless Audio Solutions for iPhone and iPod Users

22Moo today has announced the immediate availability of the iBlueT Active set and BD-906 Bluetooth adapter which provides iPhone and iPod users the ability to listen to streaming stereo audio wirelessly via a A2DP enabled Bluetooth headsets, speakers and/or car stereos.

Sydney, Australia ([PRWEB](#)) November 11, 2008 -- Ever since the release of the hugely successful and popular Apple iPhone and iPhone 3G, many owners, bloggers and reviewers worldwide have expressed their disappointment for the lack of A2DP compatibility with their phones. Many iPod owners have reported the need for wireless stereo audio, especially for when they use their iPod during exercising such as running.

22Moo's Bluetooth division - 8Bananas has today announced the immediate availability of the iBlueT Active set and BD-906 Bluetooth adapter which will enable both iPhone and iPod users the ability to listen to wireless streaming stereo audio via Bluetooth A2DP profile as well as allow them to control playback functions via AVRCP.

iBlueT Active from 8Bananas comprises of the BD-906 Bluetooth dongle and the AS1 sporty Bluetooth stereo headset. The all inclusive solution has a suggested price of \$99 USD.

The BD-906 is the world's first A2DP iPod iPhone wireless stereo audio Bluetooth 2.0 compliant adapter that features a USB power pass-through and device independent volume controls. The BD-906 connects to and is powered by any iPod and iPhone model that features a 30-pin dock connector.

Models supported includes the latest generation iPhone 3G, iPod nano 4G, touch 2G and classic 2G. The BD-906 comes complete with a mini USB charging cable as well as a USB car charger and has a suggested retail price of \$59 USD.

The AS1 is a sporty behind-the-head headset that features crystal clear sound for communication, high quality Stereo audio for entertainment as well as a smart foldable design for easy storage. It also features Bluetooth 2.0 technology and has a listening time of up to 12 hours. The suggested retail price of the AS1 is \$59 USD.

"Imagine leaving your iPod or iPhone in your backpack while going for a bike ride or run and being able to listen to your audio in full stereo and make or take calls too without taking your iPod or iPhone out!" states 22Moo's Products & Solutions Manager, Jason Chan.

All products are available for immediate worldwide shipping.
