

MailArchiva Announces Availability on Sun Microsystems' OpenSolaris Operating System

Leading email archiving product now supports the OpenSolaris OS.

London, UK ([PRWEB](#)) November 10, 2008 -- MailArchiva today announced that its flagship product line, MailArchiva has completed successful validation of the OpenSolaris(TM) Operating System (OS). Thousands of organizations around the world leverage MailArchiva's email archiving capabilities to address a broad range of business needs -- from regulatory compliance to mail server performance improvements, data accessibility and ediscovery.

As both enterprise systems and open source leaders, Sun and MailArchiva have much in common and, according to CEO and founder of MailArchiva Jamie Band, "validating MailArchiva on the OpenSolaris platform means Sun customers have a new, cost effective alternative to meet their archiving requirements."

"MailArchiva's commercial open source Enterprise Edition enables organizations of all kinds to take their investment in Sun technology a step further, and satisfy their email archiving requirements," said Juan Carlos Soto, vice president of global market development and engineering at Sun Microsystems. "We're pleased to have MailArchiva's archiving solution available on the industry's best open source platform, the OpenSolaris OS."

The OpenSolaris OS open source project was created by Sun Microsystems in 2005 to build a developer community around the Solaris OS. It is aimed at developers, system administrators and users who want to develop and improve operating systems. The OpenSolaris OS was designed as a platform for innovation to enable developers to quickly develop, test, trouble-shoot and deploy their new web services, HPC and network applications. As of August 2008, there are more than 100,000 community members registered on <http://opensolaris.org>. Seventy OpenSolaris OS User Groups around the world represent an active and growing collaboration with dozens of OpenSolaris OS technology groups and projects hosted on <http://opensolaris.org>.

About MailArchiva:

MailArchiva provides secure storage and fast retrieval of all email communication at a very affordable price. MailArchiva's open source architecture, quick installation and easy-to-use search and retrieve interface makes it the solution of choice. This means organizations can rest assured that they are meeting the regulatory requirements and that their corporate information is safe and secure.
