Study Using Qualia™ Mind with Cognizin® Citicoline Shows “Meaningful” Positive Results*

Subjects saw boosts in core reasoning, verbal ability, and concentration *

NEW YORK (PRWEB) November 28, 2018 -- A pilot study using Neurohacker Collective’s Qualia™ Mind supplement with Cognizin® Citicoline is showing promising results in cognitive brain functions. Twenty-three study participants were tested three times using the CBS Health platform created by Cambridge Brain Sciences, a leading provider of cognitive testing tools. Subjects were evaluated before starting Qualia™ Mind, after their first treatment, and again five days after using the daily dietary supplement, which contains 150mg of Cognizin® per serving. *

After five days of taking Qualia Mind, participants saw an average 85.4% increase in scores to measure ability to concentrate/avoid distraction, 37.2% increase in scores for planning skills, 31.1% increase in scores for visual representation, 16.9% increase in scores for verbal reasoning, 13.3% increase in scores for verbal short-term memory, and 10.2% increase in scores for episodic memory. *

While these are just preliminary findings on a small number of people, they are exciting initial results to see. For additional details on the study visit neurohacker.com/qualia-mind-pilot-study.

Citicoline is a critical part of several brain functions. Clinical studies show Cognizin® provides vital nutrients that help the brain maintain healthy neurons and protect them from free radicals.” *
