OnTrack Rogue Valley Chooses EnSoftek’s DrCloudEHR™, a State-of-the-Art, Enterprise-Wide Electronic Health Records Solution

OnTrack Rogue Valley selected DrCloudEHR for its ease of use, a comprehensive library of forms and documents, the seamless interface with the Oregon Health Authority’s Measures and Outcomes Tracking System (MOTS), and overall understanding of their needs.

BEAVERTON, Ore. (PRWEB) January 04, 2019 -- OnTrack Rogue Valley chooses EnSoftek’s DrCloudEHR to support their providers and growing service delivery model. OnTrack Rogue Valley required an electronic health records (EHR) system to replace their visual electronic health record that would integrate with their rapidly-growing organization and meet their unique requirements.

“Our organization was seeking an EHR vendor who would provide a solution that actively supports our growth. It had to include efficiency, ease of use, simplified billing, and comprehensive report generation. Our intensive evaluation process narrowed the field to three vendors”, said Alan Ledford, Ph.D., Executive Director, OnTrack Rogue Valley.

“We selected EnSoftek’s DrCloudEHR™ because the DrCloudEHR team demonstrates that they clearly understand our requirements. The system specifically addresses our unique needs; providing a comprehensive and effective solution, so we can do our best work and meet our specific business outcomes. EnSoftek, experts in behavioral health and DrCloudEHR, forms the right partnership to improve our clinical documentation, support our current services, and be flexible enough to meet our future needs”, said Alan Ledford, Ph.D., Executive Director, OnTrack Rogue Valley.

Developed by a team of healthcare experts, DRCloudEHR is an innovative, state-of-the-art enterprise EHR solution. The solution is designed to support the healthcare system’s growing focus on behavioral health data exchange, coordination of care, and the elimination of information gaps that could potentially inhibit positive health outcomes. DrCloudEHR, available with anytime, anywhere access, helps our customers deliver better services, improve patient care, engagement, health outcomes; and provide better overall patient satisfaction – making it the preferred solution for current and future behavioral health, health and human services, and integrated care providers.

“We are excited about expanding DrCloudEHR™ in our home state. Our work thrives on developing positive relationships with our customers, consistently providing the right EHR solution, and helping them access the right information, so they can deliver quality care.”, said Ramana Reddy, President and CEO, EnSoftek, Inc.

About DrCloudEHR™ and EnSoftek, Inc.

Currently in use in 26 states throughout the country, DrCloudEHR™ from EnSoftek is a comprehensive HIPAA compliant, meaningful use certified electronic health records (EHR) system for behavioral health, health and human services, and integrated care (primary care and behavioral health) communities. It provides powerful features like practice management, patient management, multi-disciplinary treatment planning, revenue cycle management, Unplugged™ (disconnected) module, Telehealth, and mobile access, enabling collaboration and Health Information Exchange support.

EnSoftek, Inc., headquartered in Beaverton, OR with field offices in IL, VA, and NY, is an “Enterprise
Solutions and Professional Support Services” company which provides diversified services to both public and private sector enterprises, including Information Technology, Research and Development (R&D), Cloud Computing, and Healthcare Solutions and Services.
