Mean Green Mowers Granted New Patent for Electric Zero-Turn Mowers

With over 9 years of electric mower research, development and manufacturing experience, Mean Green Mowers has patented essential features for efficient battery powered mowing.

ROSS, Ohio (PRWEB) January 23, 2019 -- Mean Green Products, LLC (aka Mean Green Mowers), the worldwide leader in commercial electric mower manufacturing, today announced that the United States Patent and Trademark Office has issued the company a new patent. Mean Green Mowers has exclusive rights to advantageous e-mower technologies covered by the patent.

U.S. Patent 10,130,037 protects the technology behind Mean Green Mowers electric zero turn mowers. The “Electric Mower Apparatus and Method of Use” patent covers many different claims and combinations. Each claim has unique features, but overall the features provide the best control response, best quality of cut, and the highest overall efficiency for an electric zero turn mower. Designed with all day run times, efficient control, drive and blade systems, as well as safety systems essential for commercial operations, patented Mean Green mowers will continue to remain at the forefront of the e-mower industry.

“Electrification of the outdoor power equipment industry is growing rapidly now that electric automobiles are gaining popularity. We are able to greatly expand this growth into the ride on mower segment with our e-Mower patented technology,” said Joe Conrad, President and co-founder of Mean Green Mowers. “Internal combustion engine mowers use the oldest technologies, are very inefficient, cause horrible air pollution, and are very noisy. Our goal was to develop an all-electric commercial mower that would run all day but emit zero emissions. Our mowers also deliver low noise, low operating costs, low maintenance, and cause less operator vibrations and fatigue. With this new patent technology, we are able to accomplish these goals.”

The e-mower industry is projected to hit $1 billion by 2025. This new patent has advanced the company’s mission of bringing e-mowers to everyone. For more information on Mean Green Mowers product line and dealer locations visit www.meangreenmowers.com or email sales(at)meangreenproducts(dot)com.

About Mean Green Mowers

Traditional gas mowers are noisy and hurt the environment. Mean Green Mowers, the leading commercial e-Mower manufacturer, builds superior electric mowers for those that care about the future of the planet. Founded in 2010, Mean Green Mowers is headquartered in the small town of Ross, Ohio, just 25 miles NW of Cincinnati, Ohio and is owned by father and son co-founders Joe and Matt Conrad.
