Zen Healthcare IT Partners with Aigilx Health to Deliver Healthcare Data Exchange and Interoperability Services

Strategic Collaboration Accelerates Health Information Exchange

COSTA MESA, Calif. (PRWEB) February 01, 2019 -- Zen Healthcare IT (“Zen”), a leading healthcare data interoperability technology and services company, has announced a strategic partnership with Aigilx Health, a technology company focused on the development of next generation health information exchange solutions. Zen and Aigilx Health offer complementary health information exchange and interoperability solutions that when combined, offer significant value to healthcare organizations.

Today, everyone involved in delivering patient care needs access to high quality data that is not only reflective of the entire continuum of care, but also relevant to the care provider. This includes doctors’ offices, hospitals, specialists, long term care, social services and other community-based services.

With Zen’s existing Gemini Integration as a Service platform for healthcare and interoperability engineering services, Zen is well positioned to integrate, implement and customize Aigilx Health solutions to best meet the needs of healthcare organizations.

“When you need projects done with tight timelines, time and again, Zen’s team has proven their reliability and ability to work with multiple vendors involved in a project to see them through success,” said Ramesh Sridharan, President, Aigilx Health, Inc. “This is a significant factor for forging a partnership with Zen Healthcare IT as we know ‘putting customers first’ is part of Zen’s DNA.”

The leadership at Aigilx Health and Zen have enjoyed a productive working relationship over the past three years, collaborating closely to develop and deploy key initiatives to enhance health information exchange in western New York.

“This strategic partnership is the natural evolution of the excellent collaboration our two teams have enjoyed over the past few years,” said Marilee Benson, President of Zen Healthcare IT. “Interoperability is achievable when best of breed companies and solutions come together to span the data silos.”

Zen is simplifying interoperability across the nation. These expanded services are now part of their interoperability technology and services portfolio. Inquiries on how these services can support health technology vendors, healthcare providers, and health information exchanges can be directed to info(at)consultzen(dot)com or by calling the interoperability services hotline at 949-396-0361.

About Zen Healthcare IT
Zen Healthcare IT ("Zen") is an interoperability technology and consulting firm. Zen helps all stakeholders in healthcare - vendors, providers, payers, HIEs, and ACOs - simplify interoperability. Using technology tools and years of interface development and support experience, Zen's solution architects and engineers design and build use-case driven solutions for health information exchange. The Zen team solves problems ranging from data acquisition, data normalization and aggregation, and data delivery challenges. Zen's national client-base leverages Zen's broad range of services, on-demand engineering, and disruptive Gemini Integration Platform helps overcome interoperability obstacles and creates sustainable health information exchange infrastructures.
