Signature Biologics Announces Entry Into the Perinatal Allograft Tissue Market With Commercially Available Flowable Umbilical Cord and Amniotic Allograft Tissue Products

Signature Matrix and Signature Cord are the culmination of decades of research and clinical use of perinatal tissue by applied stem cell research expert and Amazon best-selling author, Neil Riordan, PA, PhD, and his experienced research and development team.

DALLAS (PRWEB) January 31, 2019 -- Signature Matrix and Signature Cord are the culmination of decades of research and clinical use of perinatal tissue by applied stem cell research expert and Amazon best-selling author, Neil Riordan, PA, PhD, and his experienced research and development team. Signature Cord is a flowable umbilical cord tissue allograft that originates from the same tissue used to manufacture the purified, expanded mesenchymal stem cell product used by Stem Cell Institute in Panama to treat a variety of chronic conditions. This product is a natural source of growth factors and hyaluronic acid, and is naturally immune evasive. Most importantly, our proprietary Signature Process of manufacturing does not alter the innate regenerative properties of the umbilical cord tissue and maintains the source material integrity required for tissue repair.

Signature Matrix is a flowable allograft derived from the amniotic membrane, which serves to protect and cushion the embryo during pregnancy. The Signature Process for Signature Matrix production utilizes sophisticated, standardized processing techniques that preserve the amniotic tissue integrity and growth factors to ensure the maximum potential for enhancing the body’s natural healing ability.

In addition to the rollout of these exciting new product lines, Signature Biologics has implemented a state-of-the-art imaging and microscopy system to fully showcase the characteristics and biological profiles of each product and to demonstrate that which sets them apart from other products currently on the market.

We cordially invite all providers to apply for the opportunity to tour our production facility and Riordan Medical Institute in the Dallas-Forth Worth metroplex. Interested providers will also have the opportunity to garner information on the process of becoming a Riordan Medical Institute affiliate provider.

To learn more about our products or to apply to tour the Signature Biologics production facility and Riordan Medical Institute please visit: signaturebiologics.com/provider-application/

About Signature Biologics
Our Mission: Signature Biologics aspires to use its innovative techniques to manufacture human placental derived products to significantly improve and support the natural healing process of the body. We strive to provide best-in-class products that improve the quality of life of patients.

Our Vision: To become the premier, trusted source of innovative placental-derived therapeutic solutions in the nation, characterized by the highest quality and improved functional patient outcomes.
