Cybereason Named an IDC Innovator for Artificial Intelligence-Infused Security Solutions

Cybereason was recently recognized as an IDC Innovator for being a leader in developing an artificial intelligence based cybersecurity platform. Hundreds of blue-chip organizations around the world use Cybereason's technology to stop adversaries.

BOSTON (PRWEB) February 14, 2019 -- Cybereason, creators of the award-winning Cyber Defense Platform, today announced it recently was named an IDC Innovator for Artificial Intelligence-Infused Security Solutions. A recently released report titled “IDC Innovators: Artificial Intelligence-Infused Security Solutions, 2018” recognized Cybereason for having developed an innovative software platform helping enterprise customers stay ahead of cyber threats.

“Cybereason is identified as an IDC Innovator because it has developed a proprietary AI Hunting Platform helping hundreds of enterprise customers stay ahead of today’s cyber threats. Cybereason's AI-based solution requires minimal training and is purpose-built to identify potential threats in real-time. The multilayered defense platform does behavioral analytics and analysis on all digital actions and interactions happening across the enterprise via the endpoint,” said Cathy Huang, senior research manager for Security and Services Research, IDC Asia/Pacific.

Cybereason’s Cyber Defense Platform is used by security analysts to link together isolated suspicious activities to determine if they are part of a cyber attack. With automated hunting capabilities, as well as a powerful query engine, the solution can analyze eight million events per second, with no downtime or blind spots. The threat hunting solution also uses behavioral detection to determine suspicious and/or malicious activity.

“Artificial intelligence powers our award-winning threat hunting solution, enabling many of the world’s largest companies to root out a wide spectrum of cyber threats, ensuring that the adversaries no longer have an advantage and the defenders of proprietary information are winning the daily fight to protect the proprietary information of their employees, partners and customers,” said Yonatan Striem-Amit, co-founder and CTO, Cybereason.

About the IDC Innovators:
IDC Innovators reports present a set of vendors – under $100M in revenue at the time of selection -- chosen by an IDC analyst within a specific market that offers innovative new technology, a groundbreaking approach to an existing issue, and/or an interesting new business model. It is not an exhaustive evaluation of all companies in a segment or a comparative ranking of the companies. Vendors in the process of being acquired by a larger company may be included in the report provided the acquisition is not finalized at the time of publication of the report. Vendors funded by venture capital firms may also be included in the report even if the venture capital firm has a financial stake in the vendor’s company. IDC INNOVATOR and IDC INNOVATORS are trademarks of International Data Group, Inc.

About Cybereason
Cybereason, creators of the leading cybersecurity defense platform, gives the advantage back to the defender through a completely new approach to cybersecurity. Cybereason offers endpoint detection and response (EDR), next-generation antivirus (NGAV), and active monitoring services, all powered by its proprietary data analytics platform. The Cybereason suite of products provides unmatched visibility, increases analyst efficiency
and effectiveness, and reduces security risk. Cybereason is privately held, has raised $189 million from top-tier VCs, and is headquartered in Boston, with offices in London, Tel Aviv, and Tokyo.
