The New Data Journey; Automated Data Governance: Io-Tahoe to Conduct Webinar with Industry Analyst on Industry Trends, and Smart Data Discovery

Webinar to focus on emerging trends, like privacy regulations in Europe and United States, and how companies can best address them

NEW YORK (PRWEB) February 21, 2019 -- There are increasing global regulations that govern what data companies may keep, dictate how they can use it, and mandate under which circumstances they may keep it, or must get rid of it. From HIPAA to GLBA to GDPR and now, CCPA, these privacy regulations are forcing firms worldwide to re-examine the policies and processes they deploy to keep track of the information they have, where it resides and how it is being used.

Existing methods are no longer enough, according to the analyst community. And in the next of the ongoing series of live webinars sponsored by Io-Tahoe, a pioneer in smart data discovery and AI-driven data catalog products, noted industry analyst Krish Krishnan will explore this trend and the emerging concept of “ambient data governance.”

The Io-Tahoe webinar will focus on the push towards ambient data governance and why it matters more than ever in the age of stringent privacy regulations, such as the California Consumer Privacy Act (CCPA), the European Union’s General Data Protection Regulation (GDPR), and more.

Date & Time: Tuesday, February 26, 2019, 12 noon – 1:00 p.m. Eastern Time

Special Guest: Krish Krishnan, Sixth Sense Advisors, a recognized worldwide expert in the strategy, architecture and implementation of high-performance data warehousing and big data solutions.

Why Attend? “Companies must change the way they administer the data they’ve collected over time, as well as the additional information that comes in, virtually every minute of every day,” Krishnan says. “Advanced technologies, like the use of artificial intelligence (AI), are essential to help automate their procedures. Deploying them will enable companies to implement a smart data discovery strategy that will keep them in compliance with the myriad of rules they face and help maintain a strategic business advantage.”

You’ll Learn: In this webinar, Krishnan will address these critical issues, especially:

- The importance of automating the data governance capability within firms;
- Leveraging data governance to deliver effective insights from all the data within the enterprise; and
- Data Governance with AI/ML capabilities and its utilization to deliver privacy and compliance including GDPR, CCPA and more. Register Here: https://io-tahoe.com/webinars/

About Io-Tahoe
Io-Tahoe (www.io-tahoe.com) is a pioneer in smart data discovery and AI-driven data catalog products. In its
efforts to continue to transform the data discovery market, the platform enables organizations to discover data across a wide range of heterogeneous technology platforms from traditional databases, data warehouses and data lakes to the cloud and other modern repositories, helping enterprises trace data elements across their systems in spite of outdated metadata definitions. The product utilizes machine learning algorithms to dramatically increase the accuracy, intelligence and speed of learning of complex data elements and data relationships throughout the entire business environment. Our platform has the capability to process 30 billion customer records, 1.7 million columns and saves time by processing many data sources in weeks, instead of manual discovery and cataloging for months.

Our product has been custom-built by a team with a deep understanding of data challenges, giving us first-hand insight and appreciation into our customers’ diverse and complex data needs. Our product is particularly valuable to businesses with large numbers of customers and diverse data sets, such as those in the financial services, utilities, retail, transportation, insurance, healthcare and manufacturing industries.
