Upcoming Episode of Advancements Series to Discover Innovative Brain Stimulation Technology

DMG Productions explores advances in neurotechnology.

JUPITER, Fla. (PRWEB) April 12, 2019 -- An upcoming episode of Advancements with Ted Danson will explore recent developments in neurotechnology and will educate about innovative tools and devices being used to enhance cognitive skills. This episode is scheduled to broadcast 3Q/2019. Check your local listings for more information.

This segment of Advancements will focus on Sound for Life, a neurotechnology company helping people to reach their potential and improve quality of life through brain stimulation.

The show will educate about how Sound for Life is helping children and adults become more empowered and overcome learning, attention, speech and language, sensory and auditory challenges.

“We are very happy to be given the opportunity to present Forbrain and to detail the variety of its applications to enhance learning for all, whether for students, parents, teachers etc. We strongly believe in neuroplasticity and want to give the opportunity to everyone to train their brain and feel that they are at their full potential,” said Thierry Gaujarengues, CEO.

The show will discover how Sound for Life is using technology to make an impact. Its products; Forbrain® and Soundsory, will be highlighted.

About Sound for Life LTD:
SOUND FOR LIFE Ltd is a Hong Kong based company, with offices in Europe and in the US. Sound for Life specializes in the development of efficient products to support cognitive abilities and skills, and to help people reach their full potential and enhance their quality of life.
