Founder of Labster Predicts Huge Opportunity for Virtual Reality in Any Subject Area

In a new interview with CM Rubin World, Michael Bodekaer Jensen says it’s essential teachers are provided with professional development on how to best leverage VR as part of classroom instruction.

NEW YORK (PRWEB) April 30, 2019 -- Worldwide shipments for augmented reality and virtual reality headsets will grow to 68.9 million units in 2022, with a five-year compound annual growth rate of 55.5%, according to the latest forecast from the International Data Corporation Worldwide Quarterly Augmented and Virtual Reality Headset Tracker. In a new interview, Michael Bodekaer Jensen, Founder of Labster, tells C.M. Rubin, Founder of CM Rubin World, that this new technology will “empower students through interactive immersive learning” and enable students to experience science up close, “for instance, solving real-world global challenges or by traveling to the inner depth of cells to experience how DNA, molecules and enzymes bring cells to life.” The ultimate goal of VR education, says Jensen, is “teachers being empowered through far greater insights into their individual students' skills levels and each student receiving the best possible education given their individual progression and learning style.” Jensen believes “the training and collaboration with teachers around the world will be absolute key” to realizing these goals.
