EnVue Telematics Partners With Derive Systems To Provide Clients Powerful Vehicle Optimization Technology

*EnVue Telematics is proud to partner with Derive Systems to provide cutting edge technology that lowers fuel costs, reduces greenhouse emissions and improves safety for fleet managers.*

LONGVIEW, Texas (PRWEB) October 10, 2019 -- EnVue Telematics, a leader in the intelligent vehicle technology field, has partnered with Derive Systems to offer advanced fleet management software that shifts the responsibility for improved performance from the driver to the vehicle.

EnVue will offer clients Derive Systems software that supports better vehicle performance and offer fleet managers another way to optimize operations. Automotive technology from Derive Systems upgrades existing software to better manage vehicle speed, RPMs and tailors shift points for more conservative driving.

This leads to better fuel economy, fewer greenhouse gas emissions, and reduced risk exposure.

“By combining EnVue Telematics’ powerful fleet management software with Derive’s powerful active vehicle management solutions, fleet managers can enjoy a robust suite of optimizations and cutting-edge technology to see long-term savings and success,” said Karl Weber, SVP Enterprise Sales & Marketing for Derive Systems. “We’re excited about this partnership with EnVue Telematics and the opportunity to empower fleet managers with the right tools and technology they need to run successful fleets.”

Derive focuses on four fleet management areas: safety, fuel efficiency, productivity, and sustainability. Derive software eliminates unsafe vehicle operations such as harsh acceleration, speeding, cell phone use and driving without a seatbelt fastened.

Derive guarantees a 6% reduction in fuel savings. However, others have seen more, including a client who had an 11% percent reduction in total spending on fuel. Another saw fuel savings of $7.5 million and a 9% improvement in fuel efficiency. Still another client reported preventing more than 9,000 tons of CO2 emissions - the equivalent of removing 1,680 cars from the road each year.

EnVue Telematics is a leader among telematics providers, providing solutions for fleet tracking, vehicle tracking and optimizing fleet performance. Derive has more than two million software installations to date, producing systems that allow individuals and fleets to take control of their vehicles and optimize the way they behave.

About EnVue Telematics
EnVue Telematics has 20 years experience in providing intelligent technology solutions to the challenges facing commercial fleets. The company partners with leaders in data analytics and offers innovative telematics tools and safety devices that can solve challenges in areas such as asset tracking, safety, compliance and route optimization. The company’s user-friendly solutions combined with powerful data collection and information technology make fleet and asset management simple and more precise than ever before.

About Derive Systems:
Derive Systems is a leading automotive technology provider, with over 2 million software installations. Derive connects vehicles to the digital world, enabling individuals and fleets to take control of their vehicles and
optimize the way they behave. The Derive Systems platform writes directly to the vehicle control modules, integrating third-party software, applications, and data so that each vehicle performs specifically to unique requirements, preferences, and conditions. Derivesystems.com
