Stratodesk Collaborates with Teradici to Integrate PCoIP® Technology into NoTouch Software

Integrated solution offers highly secure PCoIP endpoints for wide choice of virtual machines hosted on public clouds

SAN FRANCISCO (PRWEB) October 10, 2019 -- Stratodesk, the creator of the leading endpoint OS and management solution for IoT, DaaS and VDI, today announced its new collaboration with Teradici, the creator of industry-leading PCoIP® technology and Cloud Access Software, to bring the PCoIP Software Client for Linux into the NoTouch software product suite. The integration means that for the first time, Stratodesk NoTouch Clients can seamlessly connect to Teradici Cloud Access Software and Amazon Workspaces, a cloud desktop service that uses PCoIP protocol technology. With Teradici Cloud Access Software, Stratodesk customers will be able to connect to virtual desktops and deliver remotely hosted applications and data to end users with the combined and hardened security benefits of NoTouch endpoint computing and Teradici PCoIP technology.

“With the integration of Teradici PCoIP Software Client into NoTouch OS, our software is now capable of transforming virtually any device into a PCoIP endpoint,” said Stratodesk CEO, Emanuel Pirker. “This is just another example of how Stratodesk is innovating VDI by providing a wide range of VDI clients to our customers.”

Supported by Stratodesk’s participation in the Teradici Advantage Partner Program, the new integration enables enterprises to harness and benefit from:
- Secure, high definition and highly responsive, PC-like computing experience.
- Zero attack surface OS that replaces Windows and eliminates the need for malware/anti-virus software.
- Standardized endpoints that can be managed from one location via Stratodesk NoTouch Center.
- Reduced hardware costs – existing and new devices can be upgraded with Stratodesk software with the PCoIP Client.

“Stratodesk’s zero attack surface OS and management solution complements Teradici PCoIP technology and keeps security management at the forefront for enterprise users,” said David Smith, CEO for Teradici. “Stratodesk software provides a flexible and comprehensive solution that allows system administrators to take full advantage of Teradici technology across their entire VDI deployment.”

The PCoIP protocol compresses, encrypts, and transmits virtual desktop display information in the form of pixels over a standard IP network to endpoint devices, ensuring maximum security. Meanwhile, Stratodesk software deploys directly onto endpoint devices bare metal, replacing Windows, eliminating the need for malware/anti-virus software, and preventing the installation of third party applications and common security exploits.

NoTouch converted Thin Clients, with the Teradici PCoIP Software Client included, are compatible with Teradici Cloud Access Software deployed in private data centers, AWS (including Amazon WorkSpaces), Google Cloud, and Microsoft Azure.

System administrators and IT managers can evaluate Stratodesk software for free (www.stratodesk.com/download), while the Teradici PCoIP Client is available to new and existing customers by purchasing a license from Stratodesk.
About Teradici
Teradici is the creator of the PCoIP® remoting protocol technology and Cloud Access Software. The company’s core mission is seamless and secure delivery of workstations and applications for end users. Teradici PCoIP technology and Cloud Access Software offer the most secure remoting solutions for public, private, and multicloud environments, enabling visualization of even the most graphics-intensive applications. The company’s solutions are deployed by Fortune 500 enterprises, government agencies, and service providers around the world.

About Stratodesk
Stratodesk is redefining end user computing by delivering an all-in-one solution for VDI, DaaS and IoT markets. Stratodesk’s cutting edge, linux-based OS and management suite, NoTouch, is a next generation, hardware-agnostic solution that enables companies to cost-effectively manage their entire secure digital perimeter. Stratodesk’s solution works seamlessly across x86 and ARM/Raspberry Pi based hardware products to provide a unified platform for your endpoints. It also increases endpoint security, simplifies user experience and allows customers to maximize the benefits of existing desktop hardware through PC Repurposing.
