SyTech Releases XLReporter v14 - Advanced Reports and Dashboards for Industry that "Go Beyond Excel"

SyTech, Inc, the market leader in automated reports and dashboards for industry, today announced the release of XLReporter version 14.0. This release expands the capability of XLReporter for Web reporting, 21CFR Part 11 features and ISA18.2 Alarm Management.

FRANKLIN, Mass. (PRWEB) November 05, 2019 -- SyTech, Inc. (The Report Company), the market leader in automated reports and dashboards for industry, today announced the release of XLReporter version 14.0. This release expands the capability of XLReporter for Web reporting, 21CFR Part 11 features and ISA18.2 Alarm Management.

This version goes beyond Microsoft Excel to design and produce reports in workbook, PDF and Web formats without needing Excel. A key benefit to users is that they can use their existing workbook skills to solve their reporting needs and, save time and money by avoiding the steep learning curves associated with new software. XLReporter propels user to “Go Beyond Excel” by taking the best of spreadsheet functionality and delivering it to an industrial environment securely and efficiently with around-the-clock robustness.

For reports to be effective, they need to be accessible and readable at one glance. With version 14.0, any device with a web browser can view automated reports on the server and produce custom reports on-demand. Reports are responsive to the device size to provide the best view of the report content.

Template development is performed in the Design Studio, the first of its kind in industry. It has the same “look and feel” of Excel and contains features like formulas, statistics, formatting, sorting, filtering, images and charts. It also provides industrial features like connectivity to data sources, analytics, wizards, scheduling, Emailing and more.

“Microsoft Excel is indisputably one of the most widely used applications in the world. Our objective was to harness this workbook technology and make it suitable for an industrial environment.” states Peter Kaprielian, CTO of SyTech. “XLReporter makes workbook reporting a reality for industrial applications and takes the user experience to the web“.

Security is paramount and XLReporter addresses this with various 21CFR Part 11 features.

- User Access: Restrict user actions and templates/report access
- Audit Trail: Keep track of all project changes and signatures applied to reports
- eSignatures: Sign reports electronically for compliance
- Versioning: Apply version control with functionality to roll back to previous versions

The implementation of ISA18.2 Alarm Management is a multi-stage process for managing alarms and is widely accepted as a good engineering practice. One stage of the process is “Monitoring and Assessment” where alarm data is analyzed for performance. XLReporter provides timely measurements of key performance indicators defined in this stage with at-a-glance dashboards that readily identify process equipment that needs operator attention.

About SyTech:
SyTech is a team of passionate people dedicated to building and delivering the best reporting and dashboard software for industry. Our award-winning product, XLReporter offers unparalleled access to the leading industrial data sources. With over 80 connectors to PLCs, Historians, Databases and IoT devices, XLReporter’s broad market reach includes Water, Wastewater, Building Automation, Manufacturing, Batch, Pharmaceutical and Energy for compliance, performance, operations and analysis reports.

Founded in 1994, SyTech is headquartered in Massachusetts, USA. Our products are resold by automation software distributors and OEMs with implementations in over 80 countries around the world and endorsed by small municipal facilities as well as major international manufacturers and Fortune 500 companies.
