Enki Stove Hob Launches to Make Cleaner, Smokeless Grilling a Reality

The Enki Stove team perfected their patented Toroidal Pyrolytic System transforming biomass into powerful flames with extraordinarily low emissions

LUCCA, Italy (PRWEB) November 05, 2019 -- Few things ruin an outdoor barbecue like the sting of grilling smoke in the eyes of the grillmaster. That’s why Enki Stove is launching Enki Stove Hob, the ultimate portable, smokeless outdoor cooking station today on Kickstarter.

Enki Stove Hob is the user-friendly grill that uses a patented Toroidal Pyrolytic System to create an intense flame without harmful emissions. Unlike traditional outdoor cooking methods, which produce as much CO2 as an SUV on a 100-km road trip, pyrolysis is the “green” way to cook outside with minimal greenhouse gas emissions. Every kilogram of charcoal burned releases 3.67 kg of carbon dioxide, compared with Enki Stove Hob which produces biochar, a pure charcoal that is used to improve the soil.

“People don’t hang around the grill at outdoor barbecues, especially if it’s breezy because of the smoke and smell,” said Ivan Mura, creator of Enki Stove Hob. “We’ve spent years improving our patented technology to create a grill that can be the center of the gathering. Enki Stove Hob is clean, green and simple to use.”

Hob transforms wood pellets and other dry organic waste into flames up to 1000 degrees celsius. The system is easy to light, and each wood pellet lasts about 40 minutes - more than enough time to grill a fantastic meal. What’s more, the cooking station is easily disassembled and easy to clean.

Hob’s manual flame control creates precision cooking as it’s easy to increase or decrease the intensity of the flame and the temperature of the grill. The stainless steel grill pan heats up to a temperature of 200 degrees celsius in minutes, ideal for searing meats and vegetables.

A truly portable grilling solution, Hob weighs less than 3kg and eliminates the need for heavy natural gas canisters or other fuels. When finished grilling, the Hob body is dishwasher friendly. Enki Stove Hob is available to pre-order for €139 at pr.go2.fund/enki.

About Enki Stove
Enki Stove takes fire products to the next level. From indoor fireplaces to outdoor fire pits, barbecues and portable stoves, Enki Stove makes it easier and safer to enjoy the beauty and power of fire. Transforming biomass into powerful, clean flames, Enki Stove’s patented technology is better for the environment and convenient for use. Enki Stove systems reduce CO and CO2 typically associated with fire and only leave behind biochar, a pure charcoal substance that can improve the soil. Enjoy fire with Enki Stove.
