

22Moo's Third-party iTunes / iPod Compatible Kiosk Solution

22Moo is currently developing a cost effective iTunes / iPod compatible kiosk.

Sydney, NSW ([PRWEB](#)) November 22, 2006 -- Australian hardware and software developer 22Moo has begun development on it's third-party iTunes / iPod compatible kiosk solution.

Currently the prototype will be powered by an Apple Intel based Mac Mini running a 15" TFT touch screen with virtual keyboard software, a wireless internet connection and a customised application for timed access to iTunes.

The kiosk will also feature multiple dock connectors and a female USB and firewire port for older iPods and shuffle owners.

Soon iPod owners around the world can download movies, videos, games and musics to their iPods from places such as airports, train stations, hotels, shopping centres etc.

For more information, please visit www.22moo.com.au

Important note: The kiosk is currently not endorsed by or associated with "Apple" and that it is purely a third party kiosk solution that is compatible with iPods and the iTunes Music Store.
