

Tegatai Launches Military-Grade IT Infrastructure and Security Solutions

Innovative Startup Offers Comprehensive, Scalable Cybersecurity Services

Phoenix, AZ ([PRWEB](#)) June 13, 2011 -- Tegatai, an innovative cybersecurity startup, today announced the launch of its IT infrastructure and security solutions at i/o, the leading provider of digital energy technology. Tegatai delivers proactive information security, data center, and cloud computing solutions for enterprises, corporations and governments. Located at i/o PHOENIX, Tegatai further plans to expand its services to i/o's modular data center in Edison, New Jersey, as well as overseas.

Tegatai's IT infrastructure and security solutions are the result of years of experience and address many key concerns of CIOs, CSOs, and IT and risk management decision makers. Tegatai provides military-grade security, enabling its clients to:

- * Reduce IT and security costs through consolidation, virtualization and the Tegatai Cloud
- * Quickly go-to-market and increase revenue with secure public, private, or hybrid cloud services
- * Provide reliable and efficient cloud computing, colocation and client-site services

“We chose to partner with i/o due to its strategic data center locations, low latency and 100% uptime SLA,” said Justin Lundy, CEO of Tegatai. “With i/o, our clients can leverage our comprehensive threat management approach to mitigating risks at a fraction of the cost over building and operating security infrastructure in-house.”

i/o provides Tegatai with data center infrastructure including “always-on” power delivery, energy recovery, network connectivity, and infrastructure designed and engineered to deliver mission-critical services to its customers. Customers operating out of i/o PHOENIX have the ability to cross-connect with Tegatai and i/o's premium offering includes free cross-connects.

Since opening its doors in 2010, Tegatai continues to block hundreds of thousands of cyber threats for itself and its clients. Tegatai recently obtained federal contractor approval to address the needs of government and military.

Tegatai additionally plans to offer its comprehensive cybersecurity services through i/o's Data Center as a Service (DCaaS™) delivered by way of i/o's modular data center platform, i/o ANYWHERE®. i/o ANYWHERE® consists of purpose-engineered modules and components that are designed and engineered to produce the world's most technologically advanced, mission-critical data center at a fraction of the cost of conventional data centers. i/o ANYWHERE® can be used as deployable military data centers, as supplemental capacity for current data centers that have reached maximum capacity, or as “swing space” as government agencies and commercial clients move and/or consolidate their current brick-and-mortar facilities.

Tegatai LLC is partnered with Ingram Micro, Microsoft, VMWare, HP, Fortinet, Cisco, Datatec, AMD, Kingston, Hitachi, Seagate and Western Digital. Our extensive partner relationships with the largest global distributors, hardware and software vendors give us the ability to offer competitive services at low prices.
