
The relatively young Plastic Surgery Hospital industry in China has been growing at the rapid pace of 16.3% annually over the past five years. In 2012, industry revenue is set to reach $106.3 million. Recent trends in the Plastic Surgery Hospital industry in China include the emergence of the male market for plastic surgery and increased patient concerns regarding the health and safety of procedures. Rising incomes and an aging population will continue to support the industry's development. However, external competition from medical spas will increase, reducing industry profitability, says IBISWorld.

San Francisco, CA (PRWEB) October 28, 2012 -- The relatively young Plastic Surgery Hospital industry in China has been growing at the rapid pace of 16.3% annually over the past five years. In 2012, industry revenue is set to reach $106.3 million. Rising demand for plastic surgery has been driven by changing attitudes toward self image, technological advancements, higher disposable incomes, and the aging population in China, says IBISWorld.

The top four plastic surgery hospitals, Shanghai Ninth People’s Hospital, Beijing Yezi Plastic and Cosmetic Surgery Hospital, Xijing Hospital, and Second Affiliated Hospital of Nanjing Medical University, account for half of total industry revenue. Major hospitals are concentrated in Shanghai, Jiangsu and Beijing and are equipped with advanced technology, professional academicians and a large number of medical beds for operations. Large and newly developed plastic surgeries can only be performed in these hospitals. In addition to large and reputed hospitals, there are many small hospitals or clinics that can only conduct some traditional low-risk plastic surgeries. These private clinic centers are expected to be acquired by larger hospitals over the next few years.

Recent trends in the Plastic Surgery Hospital industry in China include the emergence of the male market for plastic surgery and increased patient concerns regarding the health and safety of procedures. Micro-plastic or cosmetic injections, such as Botox, are the fastest-growing procedures as they are considered the safest, will the least recovery time and side effects. Rising incomes and an aging population will continue to support the industry's development. However, external competition from medical spas will increase, reducing industry profitability, says IBISWorld.
