Introduction of a Sophisticated Fractionated Co2 Laser with Advanced Cooling System for Facial Rejuvenation

Dr. Kevin Sadati has added another tool to his age-fighting arsenal. Patients at Dr. Sadati's Orange County facial plastic surgery center now have access to a highly sophisticated fractionated CO2 laser with a cooling system that creates a younger-looking, revitalized appearance to the face and/or body.

Newport Beach, California (PRWEB) June 13, 2013 -- The EXCEL02 fractional CO2 resurfacing laser offers patients an advanced, noninvasive treatment to decrease signs of aging and sun-damage on the face, neck, décolleté and hands. It helps to reduce the look of fine lines, wrinkles, brown pigmentation, stretch marks and scars, and improves skin's elasticity and tone. The EXEL02 fractional CO2 laser provides comparable clinical results to the Fraxel or Lumenis Deep and Active FX lasers with far less pain, risk and a faster recovery time. The high quality German engineering makes the EXEL02 safe, dependable and efficient. Here's how it works to rejuvenate skin:

The laser gently creates thousands of holes a minute in a patient's skin. These microscopic holes heal very quickly, thus producing healthy, new skin cells to replace the old, damaged cells and shrinking, or tightening loose skin. The heat from the laser also stimulates the production of collagen and hyaluronic acid in the deepest layers of the skin. When these natural substances are present, skin looks tighter, more voluminous and younger-looking. Unlike other fractionated CO2 lasers, the EXEL02 is equipped with the advanced air-cooling Zimmer system that reduces heat sensation at the superficial skin layer. The integration of the Zimmer Cryo 6 Chiller to supply the optimal amount of cooling (down to -30°C) to the epidermis dramatically increases a patient’s comfort and decreases potential side-effects during treatments.

"Fractional lasers offer an effective, noninvasive means to erase years from a patient’s face. The EXCEL02 is an exceptional tool that achieves remarkable results. I'm pleased to provide this cutting-edge treatment to my patients who want to look younger without undergoing a surgical procedure, said Dr. Kevin Sadati."

The EXCEL02 fractional laser is a quick procedure that calls for a local or topical anesthetic to reduce discomfort. Patients experience very little downtown following their treatment and can usually resume normal activities within a few days. There may be some mild swelling and redness following the procedure, but these usually dissipate in a few days. Patients' skin may get red after their treatment, which usually resembles a sunburn, but makeup can hide it. Most patients see results within a week of treatment. For optimum results, patients can purchase the Obagi Nu-Derm skin care system to use afterward, in order to maintain their beautiful, youthful skin. In addition, patients who protect their skin from the sun's harmful rays will maintain results longer.

Other advantages to the EXCEL02 resurfacing laser include:

The ability to be used safely on darker skin tones.
An advanced cooling system to improve patient comfort.
A scanner that treats areas of various shapes up to 4 cm.

Dr. Kevin Sadati, a board-certified facial plastic surgeon, and gifted artist, performs all of the CO2 laser treatments in his Newport Beach, California office. He has a decade of experience helping people look younger
and feel their very best. To learn more about this laser, patients can schedule a complimentary cosmetic consultation with Dr. Sadati by calling (949) 706-7776 or by visiting the website at www.galleryofcosmeticsurgery.com.

About Dr. Kevin Sadati: Dr. Sadati is the Medical Director at the Gallery of Cosmetic Surgery located in Newport Beach, California. Dr. Sadati is a knowledgeable and skilled surgeon first and foremost, but he is also an artist and sculptor.
