World Carbon Black Production to Exceed 12.9 Mln Tonnes, According to New Report by Merchant Research & Consulting

Up-to-bottom analysis and forecast of the world, regional and country markets for carbon black can be found in the topical research study “Carbon Black (BC): 2014 World Market Outlook and Forecast up to 2018” prepared by Merchant Research & Consulting and recently published by Market Publishers Ltd. According to the report, the global carbon black supply is poised to exceed 12.9 million tonnes in 2015.

London, UK (PRWEB) February 24, 2014 -- Between 2002 and 2007, the worldwide carbon black market witnessed sustained growth, driven by the embedded demand for the product from different end-use industries. However, the both demand and production decreased noticeably during the global recession years. Nevertheless, in 2010, the global carbon black market performance improved. In 2012, the carbon black production volume went beyond 11 million tonnes. APAC took the lead in terms of carbon black production, grabbing a share of around 62% of the overall production (more than 6.8 million tonnes). China, the US, India, Russia and Japan formed the top five carbon black producing countries in 2012.

The global carbon black market is predicted to register stable growth in the years ahead. The total supply is poised to exceed 12.9 million tonnes in 2015, supported by the constantly rising demand from different end-use industries, as well as planned capacity additions across the world. APAC is anticipated to maintain its leadership in the global carbon black market through 2018.

Up-to-bottom analysis and forecast of the world, regional and country markets for carbon black can be found in the topical research study “Carbon Black (BC): 2014 World Market Outlook and Forecast up to 2018” prepared by Merchant Research & Consulting and recently published by Market Publishers Ltd. The report presents a deep insight into the present situation and historical background of the market; offers future industry forecasts; grants access to cutting-edge data showing carbon black capacities, production, demand trends, exports and imports statistics, and regional price fluctuations.

Report Details:

Title: Carbon Black (BC): 2014 World Market Outlook and Forecast up to 2018
Published: January, 2014
Pages: 295
Price: US$ 4,500.00

An all-round analysis of the carbon black market at different geographical levels along with a wealth of accurate statistics illustrating carbon black capacity, supply and demand and foreign trade is provided in the in-demand topical report. The insightful study characterizes the trends prevailing in the carbon black market, characterizes the landscape of the major country and regional markets, describes the feedstock market conditions, and also scrutinizes the top growth resistors and limiters of the carbon black market. The report illustrates who stands where in the carbon black marketplace, traces the recent price changes, profiles the leading carbon black manufacturers and suppliers. Moreover, the topical study contains a comprehensive future
outlook for the carbon black market through 2018.

Report Scope:

- Deep insights into the carbon black market landscape.
- Vital information on the current scenario in the key geographical markets.
- Complete pack of the accurate statistics on the carbon black capacity, supply/demand, exports/imports.
- Insightful review of the regional price fluctuations.
- Extensive summary of the top trends in the carbon black market.
- Snapshot of the market growth limiters and propellers.
- Detailed analysis of the competitive landscape.
- All-round profiles of the dominant carbon black suppliers and producers.
- Details on the main consumers.
- Comprehensive outlook for the carbon black market through 2018.
