RevolutionEHR Announces Launch of RevDirect

RevolutionEHR Partners with Secure Exchange Solutions for Secure Provider Messaging

Madison, WI (PRWEB) May 01, 2014 -- RevolutionEHR, the leading provider of cloud-based practice management and electronic health record (EHR) software for the optometric community, is pleased to announce the launch of RevDirect, an integrated web service that allows customers to exchange patient information by secure email with any healthcare provider in the U.S.

Powered by Secure Exchange Solutions (SES), RevDirect provides a simple, scalable, standards-based solution for transmitting encrypted health information over the Internet. Dan Kazzaz, CEO of SES said, “We are pleased that RevolutionEHR selected SES Connect to provide a solution for sending authenticated patient data that is platform independent, faster, less expensive, and more secure than mail or fax.” C-CDA documentation, referral letters, photos, visual fields, OCTs and any other patient information needed for timely transition of care is conveniently exchanged by secure messaging directly through the EHR.

RevDirect is HIPAA-compliant, and utilizes the standards set by the Direct Project to meet the ONC secure external messaging requirements for Stage 2 Meaningful Use. “Not only will RevDirect help us meet Stage 2 Meaningful Use requirements,” said Mark Ruff, OD, Eye Care Associates, “but the seamless integration with RevolutionEHR’s messaging module allows for quicker and more accurate exchange of patient information, enabling us to provide better continuity of care for our patients.”

RevDirect is available to customers through RevMarket, RevolutionEHR’s online marketplace for integrated apps and services.

About Secure Exchange Solutions (SES)
Since 2007, Secure Exchange Solutions (SES) has been delivering simple, scalable and cost effective solutions for exchanging healthcare information. As a Health Information Service Provider (HISP) and a committed member of the Direct Project, SES helps healthcare stakeholders meet the requirements for Meaningful Use. SES products expedite healthcare communications, improve quality of care, optimize care transitions, and reduce reliance on costly and complex communications.
