Can the Genital Herpes Virus Cause Bladder Problems?; polyDNA Reviews the Medical Literature and Answers This Survey Question

In its June 2014 survey, polyDNA found that 62% of respondents wanted to know if the herpes simplex virus (HSV) could cause bladder problems. polyDNA reviews the literature and recommends Gene-Eden-VIR and Novirin, natural antivirals with a formula proven to reduce HSV symptoms.

Rochester, NY (PRWEB) June 19, 2014 -- polyDNA’s latest survey found that 62% of respondents wanted to know if the herpes virus can cause bladder problems. The answer is yes. “In some cases, the sores associated with genital herpes can cause inflammation around the tube that delivers urine from your bladder to the outside world (urethra). The swelling can close the urethra for several days, requiring the insertion of a catheter to drain your bladder.” (See MayoClinic.org, from May 21, 2014) (1) In addition, “The herpes simplex virus type 2 (HSV-2) may infect the urethra, making urination painful and emptying of the bladder difficult. Other viral UTIs, such as bladder and kidney infections, do not usually develop unless a person's immune system is impaired.” (See MerckManuals.com, from March 2014) (2)

The CDC notes that “Herpes is a common sexually transmitted disease (STD) that any sexually active person can get.” (See the CDC, last updated May 15, 2014) (3) Additionally, “most people with genital herpes infection do not know they have it.” (3) This means that if a bladder problem occurs, an individual may need to get tested for HSV.

polyDNA therefore recommends that individuals take Gene-Eden-VIR or Novirin against the latent HSV. The formula of these natural antiviral products was tested by Hanan Polansky and Edan Itzkovitz from the CBCD in two clinical studies that followed FDA guidelines. The studies showed that the Gene-Eden-VIR and Novirin formula is effective against HSV and other viruses. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, “individuals infected with HSV…reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR.” (4) The study authors also wrote that, “We observed a statistically significant decrease in the severity, duration, and frequency of symptoms.” (5) In addition, this natural antiviral was recently proven to reduce mental and physical fatigue in a post-marketing clinical study that followed FDA guidelines.

Both products can be ordered online on the Gene-Eden-VIR and Novirin websites.

Gene-Eden-VIR and Novirin are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinesis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses. To date, Gene-Eden-VIR and Novirin are the only natural antiviral products on the market with published clinical studies that support their claims.

EmedicineHealth says that “An infection in the pelvic area, such as herpes, can interfere with nerves in the (bladder) area. Inflammation and swelling caused by infections can also compress the urethra.” (See
EmedicineHealth.com, May 5 2014) (6) In fact, “Complications in urinary tract nervous routes due to herpes viruses as VZV and HSV-2 are well known. Acute urinary retention and chronic neuropathic pain are not rare when sacral dermatomes are involved by these viruses.” (See Le Infezioni in Medicina, from March 2009) (7)

“Because the herpes virus can cause bladder problems, we recommend that infected individuals take Gene-Eden-VIR or Novirin.” - Mike Evans, polyDNA
