Chronic Pelvic Pain Syndrome With Depression Blocks Treatment States Recent Study While Dr. Allen’s Device Treats Both Conditions Well, Highlights Fine Treatment

Chronic prostatitis/chronic pelvic pain (CP/CPPS) symptoms, including hopelessness, can be terminated gradually with Dr. Allen’s Device without resorting to long-term courses medications. At the same time a new research shows that depression may have a negative impact on treatment outcome and is a likely predictor of response to treatment in patients with CP/CPPS, states Fine Treatment.

London, GB (PRWEB) June 14, 2014 -- Men suffering from chronic prostatitis/chronic pelvic pain also often have depression that can impede current treatment options shows a recent study in The International Journal of Clinical Practice. Persistent and disabling pain, which is the sure sign of CP/CPPS, can be treated with Dr. Allen’s device successfully helping to get rid of depression gradually, Fine Treatment reveals.

The aim of the study ‘The impact of depression and somatic symptoms on treatment outcomes in patients with CP/CPPS’ in The International Journal of Clinical Practice, dated April, 2014, was to evaluate the impact of depression and somatic symptoms on treatment outcomes in Korean male patients with CP/CPPS, attending a routine clinical practice. The preliminary results indicate that depression may have a negative impact on treatment outcome and is a likely predictor of response to treatment in patients with CP/CPPS.

A previous review ‘Pain, Catastrophizing, and Depression in CP/CPPS’, dated June 30, 2013, describes the growing body of literature relating depression and catastrophizing to the experience of pain and pain-related sequelae in CP/CPPS. Depression and catastrophizing are consistently associated with the reported severity of pain, sensitivity to pain, physical disability, poor treatment outcomes, and inflammatory disease activity and potentially with early mortality.

Professor of Medicine Ivan Aghajanyan in his interview to Panorama newspaper, dated April 25, 2014, has noted, “I can now confirm that the reversal of benign prostatic hyperplasia with the use of Dr. Allen’s Device has been observed. Dr. Simon Allen’s Thermobalancing therapy is the world’s first treatment that reduces the size of enlarged prostate without medication and surgery. Our clinical studies have shown successful outcomes of treatment with Dr. Allen’s Devices in cases of chronic urological conditions, such as enlarged prostate, chronic prostatitis and kidney stones.”

The following video testimonial shows a Fine Treatment’s customer who had been suffering from CP/CPPS for over 4 years, while taking antibiotics, and who subsequently recovered in 5 months at home by wearing Dr. Allen’s therapeutic device: http://www.youtube.com/watch?v=Sx1xfwwA5KI.

“Prostate health is important for the overall health and well-being of a man, and this issue is receiving a greater attention in the media,” says Dr. Simon Allen. “Dr. Allen’s therapeutic device reduces inflammation of a prostate naturally, helping men to get rid of CP/CPPS and depression, and enjoy their life again.”
