Study: Genital Herpes Virus in Women is Spreading; polyDNA Reviews Scientific Studies and Recommends Gene-Eden-VIR and Novirin

“Genital herpes (GH) … is currently rising in the female population of developed countries,” according to a study published on June 16, 2014 in the British Journal of Dermatology (1). polyDNA reviews the scientific literature and recommends two natural herpes remedies.

Rochester, NY (PRWEB) June 22, 2014 -- The number of women with a genital herpes infection is rising. “Genital herpes, which was considered to be a minor sexually transmitted disease (STD) in the past in developing countries, is rapidly increasing.” (See the Journal of Dermatology, from February 2002) (2) HSV-2 infection is more common in women (approximately one out of four women) than in men (almost one out of five). (See MedicineNet.com, Last reviewed July 2004) (3).

polyDNA recommends that people with a genital herpes (HSV-2) infection take Gene-Eden-VIR or Novirin. The formula of these natural antiviral products was tested by Hanan Polansky and Edan Itzkovitz from the CBCD in two clinical studies that followed FDA guidelines. The studies showed that the Gene-Eden-VIR and Novirin formula is effective against the CMV, HSV, and other viruses. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, “individuals infected with the (herpes and other viruses)…reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR.” (4) The study authors also wrote that, “We observed a statistically significant decrease in the severity, duration, and frequency of symptoms.” (4)

Both products can be ordered online on the Gene-Eden-VIR and Novirin websites.

Gene-Eden-VIR and Novirin are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinesis Extract, Quercetin, Cinnamonum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses. To date, Gene-Eden-VIR and Novirin are the only natural antiviral products on the market with published clinical studies that support their claims.

Herpes rates are rising in other groups as well. “Race and ethnicity in the United States correlate with other, more fundamental determinants of health such as poverty, access to good quality health care, behavior for seeking health care, illicit drug use, and living in communities with a high prevalence of STDs. Since the late 1970s, the number of Americans with genital herpes infection has increased 30%. The largest increase is currently occurring in young white teens. HSV-2 infection is now five times more common in 12- to 19-year-old whites, and it is twice as common in young adults ages 20 to 29 than it was 20 years ago.” (3)

What treatments are available for herpes infections?

“Two types of antiviral treatments against HSV are available: topical and oral. The treatments include penciclovir, acyclovir, famciclovir, and valaciclovir. However, their effectiveness is limited. For instance, a meta-analysis of five placebo-controlled and two dose comparison studies evaluated the effect of aciclovir,
famciclovir or valaciclovir on symptoms. The meta-analysis showed that oral antiviral therapy decreases the duration and the associated pain of an outbreak by merely one day.” (See Pharmacology & Pharmacy from September 2013) (4). There are also natural antiviral products that studies show to be safe and effective in reducing herpes symptoms. Two of these products are Gene-Eden-VIR and Novirin.

“We recommend that individuals infected with the genital herpes virus take Gene-Eden-VIR or Novirin.” – Mike Evans, polyDNA
