Impact of LUTS/BPH on Quality of Life Can Be Significant Improved by Use of Dr. Allen’s Device, Highlight Fine Treatment

Lower Urinary Tract Symptoms (LUTS) in men with benign prostatic hyperplasia (BPH) can be eased gradually and end with the continuous use of Dr. Allen’s Device without surgeries. Therefore, a recent study statement that medical treatment only slowed down LUTS progression should be re-considered, states Fine Treatment.

London, GB (PRWEB) December 31, 2014 -- BPH, and its associated clinical signs of LUTS, is one of the most common medical conditions of aging men but many middle age men can suffer from these symptoms as well, which may be caused by chronic prostatitis. Furthermore, the recent study, which has compared outcomes of lower urinary tract symptoms between men with medical and surgical treatment, says that a surgical treatment option is preferable. Therefore it is important to use Dr. Allen’s Device that treats LUTS naturally, Fine Treatment reveals.

According to the article, ‘Outcomes of medical and surgical treatment for lower urinary tract symptoms (benign prostatic obstruction),’ published in the Internal Journal of Clinical Practice, dated May, 2014, “In this population-based study, operative treatment seemed to relieve LUTS, whereas medical treatment only slowed down their progression. These findings suggest that men with surgical treatment experience a more favourable outcome in LUTS than those receiving medical treatment.”

The article ‘Urodynamic characterization of lower urinary tract symptoms in men less than 40 years of age,’ in the World Journal of Urology, on April 2014, states that lower urinary tract symptoms in young men are becoming a more recognized urologic issue that can arise from many causes, each with their own management strategy. This research has concluded that lower urinary tract symptoms can present in younger men with a variety of types of voiding dysfunction.

“Thus, the routine prescription of drugs or surgeries for men with LUTS is improper,” notes Dr. Allen. “The alternative treatment options must be used for chronic prostatitis and BPH in the first place, including Dr. Allen’s Device, which eases LUTS naturally helping men to improve their quality of life.”

Please watch the an explanatory video, where The Oxford Innovation Centre has interviewed a patient who explains how he used to suffer before opting for Dr. Allen’s device, which has eased the disturbing symptoms of prostatitis naturally: http://www.youtube.com/watch?v=Sx1xfwwA5KI. Another video shows an interview with a man who has reversed prostate enlargement with Dr. Allen’s Device: http://www.youtube.com/watch?v=V5xidswhxJM.

Urologist, Professor Ivan Aghadjanyan, who leads the clinical trial on Dr. Allen’s Devices at the Department of Urology at The Mikaelryan Institute of Surgery, in his interview to the Panorama Newspaper has stated: “we have assessed over 250 men with prostate and kidney diseases. The initial results have shown high efficacy of Dr. Allen’s Devices in the treatment of chronic prostatitis, BPH and kidney stones. Younger men have been cured from the disturbing symptoms of chronic prostatitis, while senior men have had the symptoms of BPH eliminated.”
