Denver Chiropractic, LLC Introduces A New Non-Surgical, Fast Acting & Long Lasting Plantar Fasciitis Pain Treatment

Dr. Trent Artichoker is now offering the Swiss EMS Dolorclast Shockwave therapy machine in the Denver office for the treatment of plantar fasciitis and tennis elbow.

Denver, CO (PRWEB) November 15, 2016 -- Denver Chiropractic LLC., Introduces Shockwave Therapy. The only chiropractic clinic in Colorado to offer the Swiss EMS Dolorclast® Shockwave therapy.

Denver Chiropractic LLC., is thrilled to introduce an FDA approved Swiss EMS Dolorclast® Shockwave therapy machine, a high-quality device to provide Shockwave therapy in Denver.

The Swiss EMS Dolorclast® machine offers unmatched therapeutic results in treating various conditions. In the USA, it is approved to treat Plantar Fasciitis and Tennis Elbow (Lateral Epicondylitis).

Dr. Trent Artichoker MS, DC, the clinic director of Denver Chiropractic, LLC., is well known in helping patients to recover from chronic conditions with cutting edge treatments. “We are excited to announce the introduction of Swiss EMS Dolorclast® Shockwave therapy in our clinic. Shockwave therapy works quick and is more effective than any other current treatments. The world class machine can make a great difference in treating plantar fasciitis, tennis elbow, and other chronic conditions”, said Dr. Trent Artichoker. The Swiss EMS Dolorclast machine has undergone substantial testing, large-scale research and has proven it to be one of the best devices, a class 3 medical device.

There are a wide variety of conditions that can be treated by shockwave therapy. FDA approves Tennis Elbow treatment and Plantar Fasciitis treatment, by this machine. The other conditions that can be treated by Shockwave therapy are Shin Splints, Non-healing Bone Fracture, Trigger Points, Achilles Tendinopathy, Hamstring Tendinitis, Medial epicondylitis, Rotator Cuff Tendinopathy, Heel Spurs, Iliotibial Band Friction Syndrome, Greater Trochanteric Pain Syndrome, Infrapatellar Tendinitis.

The Plantar fascia is an arch support of the foot, and it helps to maintain tension in the foot. When the arch system is disturbed due to various factors, it causes chronic pain during weight bearing and is termed as plantar fasciitis.

Tennis Elbow is Lateral Epicondylitis; the patient presents with pain and stiffness in the elbow. Along with Tennis players, carpenters, office workers, mechanics, plumbers, cashiers, bowlers, and massage therapists suffer from Tennis Elbow due to overuse of the muscle.

The Swiss Dolorclast® Shockwave therapy generates shock waves which travel faster than sound waves. The high energy wave causes cavitations to be formed in the target tissue. Once they collapse, the mechanical force is generated which breaks the tissue. This stimulates new blood vessel growth, nerve growth, scar tissue destruction, collagen production, and bone tissue grow that form based on the target tissue which receives the Shockwave therapy.

Chronic tendinopathies benefit the most from Shockwave therapy. It can be used along with laser therapy, graston technique, dry needling, and active release technique to get the best results in treating various conditions.
Previously, a multi-modal approach using a combination of various treatments was used to treat Tennis Elbow, but with the arrival of the EMS Swiss Dolorclast Shockwave therapy machine, the treatment has become more efficient. It shortens the time from 6 to 12 weeks of treatment to 3 weeks. The Shockwave therapy requires only three cycles for treating Tennis Elbow and Plantar Fasciitis, and it saves patient’s money and time.

Denver Chiropractor, Dr. Trent Artichoker has a bachelor’s degree in biology and has a master’s degree in anatomy. He has a chiropractic degree and has ten years of education in the field. He keeps up to date about latest research happening in the field to serve his patients better.
