
Taking place at the Millennium Gloucester Hotel, Kensington, on 19th-20th September 2017, the event will bring together experts from all over the world to discuss how to keep critical national infrastructure – such as Water, Utilities, Oil and Gas, Nuclear, Power Generation and the Smart Grid Energy and Transport sector–secure from cyber threats.

London (PRWEB UK) 14 August 2017 -- Bringing together stakeholders from a range of critical industries with security professionals, the issues discussed will include public/private partnerships, security planning, incident response, supply chain and 3rd party risk, security operations centre development, risk management, the integration of cyber security and safety, IT and OT convergence, the importance of cyber culture, information sharing and how the industry are addressing the skills gap.

Discussing the event, James Nesbitt, Founder of organiser the Cyber Senate said: “With new threats emerging all the time, all stakeholders have a responsibility in ensuring the safety, reliability and stability of the critical national infrastructure that enables our countries to function and prosper.

“This event will look at all areas where critical infrastructure and cyber security intersect and discuss how industry leaders can manage cyber risks in their organisation by ensuring supply chain security, developing appropriate security measures in specification, operation and design and incorporating good security practices throughout the ICS lifecycle.

“The importance of this issue cannot be underestimated, and the nature of the threats against organisations are ever changing. We hope that this event will provide all attendees with an excellent grounding in areas of vulnerability, how to detect threats and how to plan to mitigate risk for these essential national assets.”
