SPH Analytics Celebrates National Health IT Week

*Partners in the advancement of health information technology to help improve healthcare*

Alpharetta, GA ([PRWEB](https://prweb.com)) September 29, 2017 -- Health information technology is a critical enabler to improve the quality of healthcare delivery, increase patient safety, decrease medical errors, and strengthen the interaction between patients and healthcare providers.

To mark the important role of health information technology, SPH Analytics and others across the U.S. have joined together to celebrate National Health Information Technology (NHIT) Week, October 2-6, 2017.

NHIT Week is a nationwide awareness week focused on the value of healthcare IT. Founded by HIMSS and the Institute for e-Health Policy in 2006, the week-long celebration brings together the Administration, Congress, corporations, providers, and non-profit organizations around the country in recognizing the value of shining the spotlight on health IT initiatives.

“Our participation in National Health IT Week highlights our organization’s commitment to ensure health information technology is integrated, interactive, interoperable, and intelligent to provide the best patient outcomes,” said Amy Amick, Chief Executive Office. “Our Nexus Platform and innovative Triple Aim solutions leverage technology to improve our clients’ performance, their patient/members’ experience, and the healthcare system as a whole.”

Building upon this year’s NHIT Week theme of Demonstrating the Value of Health IT, SPH Analytics is attending Chilmark Research’s Convergence Conference October 4-6 in Boston and supporting a client presentation on payer/provider convergence: [https://chilmarkconvergence.com/meet-selina-loupe/](https://chilmarkconvergence.com/meet-selina-loupe/)
