AEDES Architectural Forum - Berlin Germany September 9 thru October 19th 2017

Lorin Industries, Inc. sponsors AEDES Architectural Forum - "Relations" Exhibit by Platform for Architecture + Research / PAR, Los Angeles

MUSKEGON, Mich. (PRWEB) October 26, 2017 -- Lorin Industries Inc. is proud to have been a key sponsor for Platform for Architecture + Research / (PAR), presenting the exhibition "RELATIONS" at AEDES Architectural Forum in Berlin, Germany. The exhibition presents the work of American architects Platform for Architecture + Research / PAR, founded by Jennifer Marmon in Los Angeles. Questioning the role and limits of architecture today, Marmon, together with her collective team, are part of a new generation of architects exploring universal topics as a means to expand their discipline in new ways. The installation illustrates the various strategies used by the office to develop their specific design approach that aims to establish a dialogue with people as well as the local conditions to result in their individual mode of architectural expression. One of PAR's highlighted works was at the 2016 Venice Architecture Biennale with the interactive installation "Infinity" for the "Time Space Existence" exhibition, using anodized aluminum panels provided by Lorin Industries, Inc. The continuously changing light shining onto the thin anodized aluminum panels, while almost invisibly suspended throughout the space, created an effect to show that as an architect there are times when reflective forms and light perception become a predominant and crucial part of your design.

About Lorin Industries, Inc.

For over 60 years, Lorin Industries, Inc. has been providing coil-anodized aluminum to markets worldwide. Our global leadership in anodized aluminum finishing within the architectural markets continues today through innovation and creativity. Lorin has worked with some of the world's leading architects, designers, and fabricators, creating new and exciting building designs. Whether it is for exterior wall cladding systems, roofing systems, sunscreens, interior panels, or decorative interior applications, the possibilities are infinite. The natural beauty of Lorin's anodized aluminum finishes brings newly constructed and renovated buildings to life, while providing a strong durable surface that will never chip, flake, or peel. So if you are looking for new ideas and designs in metal architecture, come talk to Lorin (800) 654-1159 or find us on the web at http://www.lorin.com.
