Eyedaptic Presents Augmented Reality (AR) Visual Aid at OCTANe’s Ophthalmology Technology Summit

Jay Cormier, CEO of Eyedaptic presents how visual device prototype can improve quality of life for those with age-related macular degeneration (AMD)

LAGUNA BEACH, Calif. (PRWEB) June 28, 2018 -- Eyedaptive, creators of macular degeneration visual aids and simulated natural vision software, will showcase promising Augmented Reality (AR) visual aid prototype, designed to improve reading and everyday tasks in individuals with age-related macular degeneration (AMD). Eyedaptic’s CEO Jay Cormier will speak at the June 29 event, taking place at Fashion Island Hotel in Newport Beach, California.

Age-related macular degeneration (AMD) is the leading cause of vision loss for older individuals, impacting more than 170 million people in the US alone. The number of those impacted by AMD is expected to increase significantly in the next several years, due to our increasing aging population.

Using augmented reality (AR), and their proprietary software, Eyedaptic has developed a non-invasive, mobile visual aid, operating as a pair of high-tech eye glasses. It is designed serve as a practical replacement for low vision devices by completing the user’s field of vision, rather than simply magnify it.

“I am thrilled to present at OCTANE’s Ophthalmology Technology Summit,” commented Jay Cormier, Eyedaptive co-founder and President. “The Eyedaptic AR device is game changing, offering a unique solution for those suffering with AMD.”

About Eyedaptic

Eyedaptic is a privately held company that develops visual aid software, enabled by augmented reality hardware, for macular degeneration and other retinal diseases. The proprietary Simulated Natural Vision software goes beyond magnification to enable a fuller field of vision, for those suffering from central vision disorders such as AMD (age-related macular degeneration), to revitalize their quality of life.
