Venturo® Releases New Crane Safety Control Management System

Venturo Hydraulic Service Crane Operators will benefit from VLC™ crane safety controls

CINCINNATI (PRWEB) January 23, 2019 -- The role of technology in the American service truck industry is playing a significantly more important role in new product development. One of the biggest impacts has been the development and acceptance of PLC systems (Programmable Logic Controls). These European-style control systems give the user greater control and safety features by using multiple sensors and user feedback functions with proprietary logic programming. This technology has been a long time coming and Venturo® has developed its own system.

The new Venturo Logic Control (VLC™) crane safety management system provides safe crane operations for operators. Features of this new system include vehicle stability/grade indications, overload protection, wireless or CAN communication, and multiple alerts and displays utilizing lights, controller vibrations and screen text.

As part of the new VLC™ system, operators will receive an all-new wireless-remote, pistol-grip controller. This will be a standard feature as part of the system for all proportionally-controlled Venturo hydraulic service cranes. The VLC™ controller offers more comfort and less fatigue with over 60 hours of battery life, 4-line, 20-character screen display, (7) 2-way toggle switches, (4) momentary push buttons, vibration and LCD display alerts with 2.4GHz wireless or wired cable operation.

Precision, overload-protection increases the operator’s safety by controlling and preventing any type of overload on the service crane. A result of this feature is a lighter-weight crane which increases payload capacity on your service truck.

Multiple safety and capacity alerts warn operators of malfunction or overloads. The VLC™ system features (4) different types of alerts:

- LCD Display Screen Text
- Transmitter Handle Vibrations
- Green/Yellow/Red alert light located on the underside of the boom
- Corresponding lights on the wireless receiver

Venturo’s VLC™ crane control management system will become a standard feature on the entire Venturo Hydraulic Service Crane product line. For more information, visit our website http://venturo.com or call 800-226-2238.

About Venco Venturo Industries LLC
Venco Venturo Industries LLC has created a specialized line of high-caliber cranes and hoists for generations. Our products are rugged, tough, made in America, and built to last. Venco Venturo’s quality craftsmanship is backed by straight talk, real expertise, and superior customer service. For more information about Venco Venturo’s complete line of truck-mounted cranes, crane bodies, hoists, and accessories, visit www.venturo.com or call 800-226-2238.
