Patient Consent – Trials and Tribulations of the Traditional Approach. Can eConsent Deliver an Improved Method? A New Webinar Hosted by Xtalks

Traditional patient consent is a time-consuming and inconsistent process that places additional demands on valuable site staff. It can be confusing and intimidating for patients who, as a result, are poorly informed and reluctant to ask important questions. This results in high consent withdrawal and patient dropout, which are expensive and can introduce trial delays. During this complimentary webinar, learn about best practices for managing traditional patient consent and how eConsent technologies can facilitate further improvements.

TORONTO (PRWEB) March 27, 2019 -- Patient consent is one of the most important parts of clinical trials, yet is consistently the number three critical finding from regulatory inspections resulting in an FDA Form 483. The traditional patient consent strategy is time-consuming and inconsistent, and sometimes patients are too reluctant to ask important questions. Together, these result in high consent withdrawal and patient dropout, which are expensive and can introduce trial delays.

Join Jacquie Mardell, vice president of Clinical Operations at Ascendis Pharma, and Neil Vivian, senior director of Business Solutions at OmniComm Systems, Inc., in a live webinar on Thursday, April 18, 2019 at 11 a.m., ET (4 p.m. BST/UK) to learn about best practices for managing traditional patient consent and how to use electronic data capture (EDC) and eConsent as alternative strategies.

The speakers will demonstrate how to:

• Improve patient understanding
• Test and reinforce participant comprehension
• Provide feedback on how consent materials could be improved
• Improve the patient recruitment process and reduce dropout rates
• Enable process efficiencies
• Reduce site workload
• Improve consistency by reducing compliance issues
