PCL Construction & CopperTree Analytics Team to Deliver Smart Building Technology

CopperTree Analytics Inc., a worldwide leader in building data and energy analytics software, and PCL Construction, one of the largest contracting organizations in North America, today announced that they have entered into a partnership agreement to deliver smart building technology to the construction and real estate markets.

SURREY, British Columbia, and EDMONTON, Alberta (PRWEB) April 08, 2019 -- The Agreement means that PCL and CopperTree will be jointly delivering building data analytics, energy management and monitoring-based commissioning technologies and services embedded into both new construction and retrofit building projects throughout North America.

“The demand for smart buildings has been rapidly increasing and new advances in technology have meant that the status quo in the construction and operation of buildings is no longer fulfilling the evolving requirements of building constructors, owners, operators and occupants. The increasing ubiquity of IoT sensors and the need for a more intelligent way to use all the data generated by buildings presents many opportunities for market leaders like PCL and CopperTree to step in with technologies and services which meet those needs to improve the construction and commissioning process, improve occupant experience, reduce energy consumption, and streamline the maintenance operations of their buildings,” said Keith La Rose, Director of Sales & Marketing at CopperTree Analytics.

“Everyone we work with wants technologies that simplify and reduce building management, maintenance and energy costs while also enhancing tenant experience and satisfaction,” said Mark Bryant, Chief Information Officer at PCL. “By marrying CopperTree’s building analytics software, with Job Site Insights™, PCL’s smart construction platform, we will further improve Lean construction, enable smarter buildings and cities, and increase both productivity and quality, while reducing our carbon footprint on our projects and our customers assets.”

The companies believe that embedding data and energy analytics services into new and existing buildings as part of the construction process, and then continuing their delivery through commissioning and well into the operational years of the buildings will lead to better outcomes for building owners, operators and occupants.

About PCL Construction

PCL is a group of independent construction companies that carries out work across Canada, the United States, the Caribbean, and in Australia. These diverse operations in the civil infrastructure, heavy industrial, and buildings markets are supported by a strategic presence in 31 major centers. Together, these companies have an annual construction volume of $9 billion, making PCL the largest contracting organization in Canada and one of the largest in North America. About CopperTree Analytics Inc.

CopperTree is the leader in building and energy data analytics for the built environment. The company was formed as a response to the growing demand for building energy management services and improved maintenance procedure requirements in buildings. CopperTree Analytics delivers building data and energy analytics software to many markets throughout the world, including healthcare, higher education, commercial real-estate and government agencies. CopperTree assists their clients by helping to create operational efficiencies, reduce their buildings' energy consumption, and enhance their bottom lines.
