Bayshore Networks Is A 2019 Red Herring Top 100 Winner, Adds To Recent Tally of Major Wins

Red Herring win validates Bayshore's Modular ICS Security Product Strategy following exhaustive evaluation and competitive presentation rounds of competition

DURHAM, N.C. (PRWEB) May 17, 2019 -- Red Herring today announced the winners of its Top 100 North America 2019 event, recognizing the continent’s most exciting and innovative private technology companies.

The winners, celebrated at a special awards ceremony at the Westin Pasadena hotel, have been chosen from thousands of entrants, whittled down to hundreds making the trip to California. The ceremony, led by Red Herring chairman Alex Vieux, was preceded by two days of keynote speeches, discussions and finalist presentations.

Companies were judged by industry experts, insiders and journalists on a wide variety of criteria including financial performance, innovation, business strategy, and market penetration. Winners ran the gamut of verticals, from FinTech and Marketing to Security, IoT, and many more industries.

“2019’s crop of Top 100 winners has been among our most intriguing yet,” said Vieux. “North America has led the way in tech for so many years, and to see such unique, pioneering entrepreneurs and companies here in California, which is in many ways the heartland of the industry, has been a thrilling experience.

“What has excited me most is to see so many people forging niches in high-tech and cutting edge sectors,” added Vieux. “Some of the technical wizardry and first-rate business models showcased here at the conference has been fantastic to learn about. We believe Bayshore embodies the drive, skill and passion on which tech thrives. Bayshore Networks should be proud of its achievement - the competition was incredibly strong.”

"Bayshore is tremendously pleased to see its recent efforts to refocus its product portfolio and bring four new products to market rewarded by the Red Herring Top 100 Award," said Kevin Senator, President and CEO. "From our SaaS OT remote access solution, Beacon; to Lighthouse, our flagship ICS visibility, asset management, and policy-enforcing protection system; to SCADAFuse, our turnkey protection appliance for less complex industrial network environments, Bayshore offers a comprehensive, modular strategy which enables customers to start with whichever use case is most pressing, and expand their deployments over time while preserving uniform policies and centralized management. Our unidirectional software gateway product, Compass, will be coming later this summer, to add another solution to the platform."

In addition to the Red Herring award, Bayshore has also enjoyed recognition from two other major awards in recent weeks. The first, Network World's Top 10 IoT Security Startups to Watch, was also the result of a competitive and unpaid evaluation process driven by Jeff Vance, owner of Startup50 and contributor to Network World, Forbes.com, CIO, Wired, eWeek, and many others. Information about Bayshore's win can be found here: https://www.networkworld.com/article/3391413/10-hot-iot-security-startups-to-watch.html

Finally, Bayshore was also selected as a Frost & Sullivan 2018 North America Customer Value Leadership Award for its Lighthouse product and related modular ICS strategy. Frost & Sullivan reviewed Bayshore's plans and corporate fundamentals in detail and selected the company as an award winner earlier this year. The material about this award may be found here: https://www.prnewswire.com/news-releases/bayshore-networks-
applauded-by-frost--sullivan-for-its-comprehensive-cyber-security-platform-lighthouse-300848156.html

"The demand for real problem-solving tools in the industrial network security space is growing tremendously," said Senator. "Bayshore has traditionally focused on the most sophisticated, highest end of the market, but we are confident that the same core engine in use for the past 6 years in some of the world's leading manufacturing and infrastructure environments is now ready for use in mainstream products with more of a plug-and-play approach."

Bayshore invites interested parties, including potential resellers and distributors, to contact the company to discuss the portfolio in greater detail.

About Bayshore Networks

Bayshore Networks is the leading provider of industrial cyber protection. The Company's award-winning technology unlocks the power of the Industrial Internet of Things (IIoT), providing enterprises with visibility into their Operational Technology infrastructure while safely and securely protecting ICS systems, industrial applications, networks, machines, and workers from cyber threats.
