The Benefits of a Seamless IRT and EDC Integration in Clinical Trial Execution, Upcoming Webinar Hosted by Xtalks

While clinical trials are becoming increasingly complex, eClinical solutions don’t have to. Two software companies have teamed up to deliver a powerful, streamlined integration to better serve sponsors working with complicated studies. Join this free webinar to find out how one sponsor has benefited from moving to a single provider to a harmonized, best-of-breed approach.

TORONTO (PRWEB) January 08, 2020 -- There’s a lot of discussion around the benefits of a unified platform, or one-stop-shop for eClinical solutions (Electronic Data Capture [EDC], Interactive Response Technology [IRT], eConsent, electronic Patient-Reported Outcomes [ePRO], etc.). While a single platform may satisfy the needs of smaller studies, what happens when your studies become larger and your protocols become more complex? Increasing complexities often force study teams to start looking for multi-vendor approaches.

On Thursday, January 23, 2020 at 11am EST (4pm GMT/UK), three expert panelists will lead a live session where they will discuss:

- How a harmonized IRT & EDC integration can transform clinical trial execution
- The benefits of utilizing two best-of-breed eClinical software solutions (pros and cons of the multi-vendor approach)
- How to optimize workflow and streamline patient randomization and drug supply management to support complex studies

The featured speakers include:

- Scott Dixon, Global Vice President, Strategic Partnerships, Suvoda
- Drew Garty, Chief Technology Officer, CDMS, Veeva Systems
- Catherine Munera, PhD, Head of Biometrics, Cara Therapeutics

Catherine Munera from Cara Therapeutics will discuss the benefits the company has seen in their studies by moving from a single provider to a harmonized, best-of-breed approach. The webinar will also include other examples illustrating both Suvoda and Veeva support patient cohort branching, treatment cycles and system integrations.
