ATEN Announces Cooperation with Bosch for New Generation of Meeting Technology

Integrated Control Solutions Enhance Meeting Technology and Reinforce Global Competitiveness for Users.

IRVINE, Calif. (PRWEB) January 27, 2020 -- ATEN Technology, Inc., the technology leader and global manufacturer of KVM and Pro AV connectivity solutions, today announced that its Pro AV and KVM products will be integrated with Bosch’s Digital Congress Network (DCN) Conference System to custom build meeting technology needed for the development of modern enterprises. Through control, data sharing and Pro AV management, the efficiency of meetings can be optimized and therefore lead to enhanced corporate competitiveness.

As we enter the era of big data and information fragmentation, enterprises will have to enhance their reaction efficiency and decision quality to cope with variable competition. Thus, a meeting that could accelerate decision-making and improve team engagement could be the key to success.

ATEN focuses on intelligent control solutions, having developed a series of control systems including the VK2100 control box, VK1100 compact control box, VK224 4-port serial expansion box and VK6000 configurator software – to integrate with all kinds of AV meeting equipment.

In order to satisfy customers’ needs for intelligent control of meetings, ATEN choose to cooperate with Bosch, a leader in business meeting applications. As a global leading brand, Bosch’s digital discussion systems are highly praised by the industry, and the company’s outstanding performance could greatly improve the efficiency and fluency of meeting communications. With the integration of Bosch’s digital discussion systems – including DICENTIS, DCN and CCS1000D – ATEN can manage meeting systems through one-touch operation.

With the product integration, additional new features include:
- The activation status of all microphones on the control system interface
- Chairperson’s microphone priority settings
- Turning the speaker’s microphone on and off
- Indicating the status of awaiting speakers
- Other parameter settings, including microphone sensitivity
In addition, ATEN also integrates with third-party equipment. Users can:
- Track a speaker’s movement with conference cameras
- Adjust AV settings according to different meeting scenarios
- Integrate and automate environmental equipment (such as lighting, air conditioning and curtains)
With ATEN’s and Bosch’s existing strength and experience in the AV industry, ATEN customers using the new integrated control solutions can gradually enhance their meeting technology and reinforce global competitiveness. In the future, ATEN will continue working with Bosch to develop new business values through assisting enterprises’ transformation to intelligent meeting control.

About ATEN Technology, Inc.
ATEN Technology, Inc., is the technology leader and global manufacturer of KVM and Pro AV connectivity solutions, and the U.S. subsidiary of ATEN International Co., Ltd. (TWSE: 6277), established in 1979. A certified member of the HDBaseT Alliance, holding over 500 industry patents, ATEN offers integrated KVM, Professional Audio (Pro AV) and Intelligent Power solutions, across all industries including corporate, commercial, government, industrial, entertainment, educational and retail environments.

A technology first company, ATEN’s advanced ability to quickly develop customized solutions in KVM, Pro AV, PDU, USB and data communication lines allows the company to build products that connect, manage and optimize electronics based on customer need. ATEN’s comprehensive portfolio of innovative, reliable products is available worldwide, with local U.S support.
