Rapid Growth Spurs Wavicle Data Solutions to Open New Data and Analytics Hub in India

New 20,000 square foot space reflects expanding data and analytics talent pool and technology investments for Wavicle clients and employees

CHICAGO (PRWEB) February 03, 2020 -- Wavicle Data Solutions, a leading provider of data and analytics solutions and services, is hosting a grand opening today for its new 20,000-square-foot data and analytics hub in Coimbatore, Tamil Nadu, India. Growing data and analytics teams, new clients, and increased investments in technology spurred the need to create a single, collaborative environment for its development teams.

“At Wavicle, we are committed to investing in our teams and technologies to provide our clients with innovative solutions that leverage data and analytics, including AI and machine learning initiatives,” stated Naveen Venkatapathi, President and Managing Partner at Wavicle Data Solutions. “Creating a work environment that blends innovation, passion, and creative thinking with accelerated delivery, fosters happy teams and loyal customers.”

Wavicle’s expanding global presence demonstrates its focus on giving clients fast access to quality data and insights. To that end, its India data and analytics hub is home to developers with skills and certifications in traditional and cloud technologies, including AWS, Talend, Databricks, Azure, Snowflake, and many others.

“Wavicle is driven to create modern, cutting-edge data and analytics solutions for our customers as we help them on their digital journey,” said Niyaz Kamookagath, Managing Partner at Wavicle Data Solutions. “We aren’t just satisfied with what has been done. We want our teams to dare to explore new possibilities and build solutions in data and analytics. Bringing all of our India developers under one roof will facilitate that.”

To encourage its teams to stay on the forefront of innovations in data and analytics, Wavicle has developed “Waviquest,” a three-month program where Wavicle invests in small group teams on a “quest” to imagine, create models, and build MVPs. Waviquest teams are given recognition and bonuses based on final outcomes.

Wavicle’s new facility, located at Hanudev Infopark Pvt., Nava India, Coimbatore, joins its current India administrative headquarters also in Coimbatore. Heading up the India leadership team are Mathesh Jaybal, Managing Partner, India, and Ramya Arumugam, Director of Operations, India.
