Infinnium Honored in National Law Journal 2020 Emerging Legal Technologies: Changing the Way Law Firms and Legal Departments Operate

The National Law Journal has named Infinnium to its 2020 “Emerging Legal Technologies” list of providers. The honor is a result of Infinnium’s 4iG platform, a suite of advanced technologies that organizes all of an enterprise’s data into a unified repository for unprecedented visibility, control, and analysis. Infinnium will be attending Legalweek in New York, February 3-6.

CHANTILLY, Va. (PRWEB) February 03, 2020 -- Infinnium, a software company delivering AI-powered information governance solutions, today announces the National Law Journal has named Infinnium to its 2020 “Emerging Legal Technologies” list of providers. The honor is a result of Infinnium’s 4iG platform, a suite of advanced technologies that organizes all of an enterprise’s data into a unified repository for unprecedented visibility, control, and analysis. Infinnium will be attending Legalweek in New York, February 3-6.

Exponential increase of data volume and types across the ever-growing multitude of siloed applications have combined to exceed organizations’ abilities to manage it conventionally. Organizations face challenges to identify and organize their data, comply with regulatory requirements, apply policy or process, or optimize its value. Absence of a specifically purposed information governance technology has intensified these challenges for organizations with increased focus and introduction of privacy regulations across the globe.

Infinnium’s 4iG solves this unmet need. 4iG is an advanced, technology platform purposely designed to address ever-expanding data challenges related to information governance, e-discovery, investigations, privacy, and compliance matters. 4iG continuously organizes enterprise data in a single, unified repository where artificial intelligence identifies and categorizes information while helping protect PII and other sensitive information secure.

Harsh Sutaria, Infinnium co-founder and chief success officer shared, “We are honored to be recognized as an emerging technology provider by the National Law Journal, but even more to be true technology partners to our clients, arming them with our game-changing platform to enable them to focus on what matters: executing information governance as a business strategy, benefiting from successfully managing their data, exerting strong control over PII and gaining long term trust of their constituents.”

About Infinnium
Infinnium LLC is redefining the way organizations interact with data to gain actionable intelligence. The company develops software solutions for corporations, law firms, service providers, and others using modern technologies like AI and machine learning to improve business decision-making and information management including IG, compliance with GDPR, CCPA, HIPAA, and other privacy regulations and electronic discovery. The Infinnium team of experts brings simplicity to the complex world of digital data, combining the strengths of people and modern technology to help organizations harness their data and empower them to make smarter business decisions and effectively address today’s complex information management needs.
