StormwateRx LLC Proudly Introduces Frontline™ - the ultimate Industrial Stormwater Catch Basin and Trench Drain Inserts

You asked for the ultimate drain inlet insert for industrial stormwater applications...we delivered! Welcome to the Frontline™!

PORTLAND, Ore. (PRWEB) July 06, 2020 -- StormwateRx, in exclusive partnership with Frog Creek Partners, is proud to announce the availability of our newest stormwater treatment product, the patented Frontline™ family of drain inlet inserts.

Frontline™ is available in two common industrial configurations, the Frontline™ CBI (Catch Basin Insert) and the Frontline™ TDI (Trench Drain Insert) both of which offer the same simple installation, operation and high performance that is common to the other StormwateRx products.

Headquartered in Portland, Oregon, StormwateRx, a Newterra Company, designs, manufactures, installs, and maintains stormwater treatment products for customers worldwide. By adding Frontline to the Clara®, Aquip®, Purus®, and Zinc-B-Gone® product lineup, StormwateRx offers industrial facilities the most comprehensive line of industrial stormwater treatment products on the market to aid in compliance with stormwater discharge regulations such as the Multisector General Permit and the Industrial Stormwater General Permit.

Frontline is the first line of defense against trash, oil, hydrocarbons, nutrients, and metals in stormwater runoff. Designed specifically for industrial applications, Frontline offers the best performance and largest adjustable overflow of any drain inlet insert on the market. Its flexible design fits under the existing storm grate in a drop inlet or a trench drain configuration. Frontline is easy to install—just insert the frame and pollutant filtration devices into your existing storm drain inlet.

Frontline™ is built to last and easy to maintain. Its super-duty, stainless steel construction is designed for years of rugged industrial use. Maintenance takes just a few minutes with readily available, off-the-shelf, replacement filtration and StormwateRx-formulated media inserts. The filtration bags are available for deep or shallow catch basins while the media can be configured to your site’s needs and replaced into the same housing by one person. Monitoring is a breeze using the optional sample port.

Frog Creek Partners president and founder, Brian Deurloo, states, “Stormwater pollution is a difficult problem to solve. Our team believes that an arrangement between Frog Creek Partners and StormwateRx will create immense value for industrial facilities seeking reliable stormwater filtration solutions. StormwateRx and Newterra have a great track record in the water industry and we appreciate the opportunity to become a part of their product lineup.”

Frog Creek Partners is an environmental technology manufacturing company that creates innovative products to remove pollution from stormwater.

Frog Creek is mission driven and dedicated to improving the health of watersheds by building long-term relationships with clients, partners, and anybody else who has a passion for clean water like we do. Because “Clean Water is a Good Thing™.”

With Frontline™, backed by StormwateRx’s proven stormwater expertise and Frog Creek Partner’s
manufacturing know-how, you can stop industrial pollutants at the door, keeping your site cleaner and boosting the performance and runtime longevity of your downstream treatment best management practices.
