IntelliSoft Group Helping to Meet the Challenges of OPPE/FPPE in Medical Credentialing

Medical credentialing software by IntelliSoft Group, contains sophisticated functionality in automated credentialing, to help you meet the Joint Commission's regulations for OPPE and FPPE compliance.

Nashua, NH (Vocus) June 3, 2009 -- The Joint Commission recently introduced revised credentialing medical credentialing software and privileging standards. These revisions are tied directly to the privileges being sought by and granted to practitioners. The six areas of "General Competency" as developed by the Accreditation Council for Graduate Medical Education (ACGME) and the American Board of Medical Specialties (ABMS) are used in the ongoing monitoring and measurement of the quality of the practitioner’s professional practice.

Focused Professional Practice Evaluation (FPPE) allows the organized medical staff to focus its evaluation on specific aspects of a practitioner’s performance. It is used as a period of time which confirmation must be obtained, in relation to the practitioner’s competency http://www.intellisoftgroup.com physician credentialing within the organization’s setting, and for questions relating to a practitioner’s professional practice during the course of the Ongoing Professional Practice Evaluation (OPPE).

Credentialing credentialing software and privileging are performed in a cyclical process. Practitioners are evaluated when privileges are initially granted, then every two years thereafter. The OPPE process requires medical staff to conduct ongoing evaluations of each practitioner’s professional performance. This process allows for early discovery of problems related to a practitioner, and provides a more efficient privilege renewal process based on actual evidence.

IntelliCred, by IntelliSoft Group, http://www.intellisoftgroup.com medical credentialing is an automated medical credentialing software credentialing software product. Our software contains sophisticated functionality that healthcare credentialing automated credentialing professionals require, to comply with the Joint Commission’s regulations.
