New Antibacterial Handwash Kills 99.99% Bacteria in 15 seconds

Omega Tech Labs of Boise, Idaho releases a new Antibacterial Handwash that Kills 99.999% bacteria in 15 seconds. It is available for retail sales or private label. The brand name chosen is 'FRESH PROTECT'.

'FRESH PROTECT' Antibacterial Cleanse is the result of many years of sleuthing and trial by Doug Warren, President and Glenn Mouser, Vice President of Research & Development. They formulated the proprietary solution that destroys bacteria in 15 seconds by breaking up the cell wall that all bacteria (by definition) have. As the fastest laboratory tests specified by the FDA take 30 seconds to run, 99.999% of the bacteria were dead by the time the 30 seconds had elapsed. Since there were several million colonies of bacteria to start, we can more than likely assume that all were, indeed, destroyed.

'FRESH PROTECT' Antibacterial Cleanse formula was developed to fill the need for a non-toxic, non-staining, highly efficacious product that would moisturize and condition skin. Botanical oils and skin emollients formulated within the 'FRESH PROTECT' Antibacterial Cleanse formula leave skin feeling soft and smooth while it aids in the healing of minor cuts and abrasions. This unique antibacterial formula complies with FDA testing protocols (21 CFR 333) and can be packaged as a handwash / lotion, wipe, foamer or spray. Omega Tech Labs would be honored to assist you and your company in developing the right product and delivery system for your company.
