Online Breast Augmentation and Breast Implants Guide Answers Plastic Surgery Questions, Focuses on Patient Concerns

_Breast Implants USA_ publishes online Breast Augmentation and Breast Implants Guide to address patient questions and concerns regarding breast augmentation. Topics covered include incisions, round and teardrop shape, smooth and textured implants, saline and silicone, risks, complications and expectations.

Culver City, CA (PRWEB) August 15, 2010 -- Breast Implants USA presents the Breast Implants and Breast Augmentation Guide as a concise, centralized source of information regarding concerns and questions raised by women considering breast augmentation surgery.

"So often, we hear women asking for someone to cut through the clutter, to present information that responds to a main set of concerns," states David Phillips, CEO of NKP Medical Marketing, parent company of Breast Implants USA. "We have collected questions from our website visitors and consulted with our Board Certified Plastic Surgeons to come up with a handy guide covering many details which are often overlooked in the online environment."

The guide covers several aspects of the breast augmentation procedure, Phillips notes. "Incision locations, saline and silicone implants, shape, texture and profile are among the topics covered in the guide. In the noise of the internet, many of these details get lost or are not adequately explained, and potential patients get frustrated."

Phillips says Breast Implants USA aims to remove that frustration and help connect women to Board Certified Plastic Surgeons. "Only when a woman meets with a qualified, experienced surgeon can she start to discover answers which are most relevant to her," Phillips says.

While the breast implants guide covers many details of the procedure, Phillips stresses that no such guide can cover every aspect of a surgical procedure for every individual.

"Many of these basic questions need to be answered in order for a patient to move forward. In the end, though, each woman is an individual, and her decisions need to be based upon who she is. Breast Implants USA recommends that those sorts of decisions be made in consultation with a surgeon who specializes in the Breast Augmentation procedure."

The Breast Implants and Breast Augmentation Guide is available for free at Breast Implants USA.
