Dissolve Any Type of Kidney Stones, Oxalate or Uric Acid, with New Thermobalancing Therapy in Confidence and Reject Lithotripsy States Fine Treatment

New Thermobalancing Therapy helps to get rid of kidney stones without depending on which of the four kidney stone types it is need to dissolve, Fine Treatment reveals. This natural therapy changes the common advice that kidney stones treatment options depend on kidney stones substance to a new one – dissolve any type of kidney stone straightaway rejecting dangerous lithotripsy.

London, UK (PRWEB) March 05, 2012 -- Fine Treatment recommends do not waste time choosing kidney stones treatment depending on the type of kidneys tones (oxalate or phosphate, uric acid or cystine) and to dissolve them straightaway with new Thermobalancing Therapy without lithotripsy or shock waves (ELSW) that may harm. According to the Kidney.org or Hospimedic, lithotripsy develops diabetes at almost four times the rate of those whose kidney stones have been treated by other methods. Regarding the importance or not of kidneys stones structure, many official sites such as National Kidney Foundation or NHS mention that individual treatment for kidney stones depends on the type of kidney stones.

According to the National Institute of Health (NIH), doctors have found four major types of kidney stones. The most common kidney stone type contains calcium in combination with either oxalate or phosphate. These are called calcium oxalate stones or calcium phosphate kidney stones, respectively. Other type is struvite stone may form after an infection in the urinary system. These stones contain the mineral magnesium and the waste product ammonia. A uric acid stone may form when the urine contains too much acid and there are cystine stones which are rare and usually runs in families.

However, new Thermobalancing Therapy dissolves all types of kidney stones and as there are 2 thermo-elements applied to left and right sides, Dr. Allen’s Device for Kidney Care helps to get rid of these stones in both kidneys. Please see a testimonial confirming that Dr. Allen’s Device for Kidney Care dissolves even a huge kidney stone: http://www.youtube.com/watch?v=EOMUqHvrSfk.

“Until now people are obligated to undergo lithotripsy and be afraid of receiving complications such as high blood pressure or diabetes. It must be changed!” says Dr. Allen. “Fine Treatment offers an effective therapeutic device that dissolves any type of kidney stone, oxalate or uric acid, without adverse side effects.”
