Sugar Land Dentist, Mark Lukin, D.D.S. Introduces CEREC One Hour Dentistry to Lukin Family Dentistry

Sugar Land Dentist, Mark Lukin, D.D.S. now offers One Hour Crowns, Inlays, Onlays and other dental restorations with the introduction of the CEREC digital impression and milling system to Lukin Family Dentistry.

Sugar Land, TX (PRWEB) May 18, 2012 -- Dr. Mark Lukin is pleased to announce the implementation of new technology into his Sugar Land dental office that has revolutionized the way dentistry is performed. The Sirona CEREC digital impression and milling system allows dentists to perform a high quality, realistic dental crown, and other dental restorations, from start to finish in just one visit.

"It's important to my patients with busy schedules to be able to have their dentistry performed quickly, comfortably, aesthetically and completely." Dr. Lukin continues, "By using the CEREC to perform high quality, natural looking dental restorations, patients can get their dentistry done in one appointment."

Traditional crowns require at least two visits to complete. Taking traditional impressions, placing a temporary crown, and then sending the impressions to a dental lab to have the restoration created are extremely time consuming and can take weeks to complete.

Sugar Land Dentist, Dr. Mark Lukin says, "People with jobs that offer limited amounts of time off want to spend that time with family, running errands, and on vacation, not at the dental office. I can still offer the best quality dental restorations, but without the time requirements that we used to be tied to. Now patients can have their work completed in one appointment, start to finish."

To start the process with the CEREC, the tooth is prepared and digital impressions are taken with a small camera that can fit directly over a patient's tooth and take pictures. The pictures are then sent to a milling unit within the office. The restorations are milled out of blocks of high strength, tooth colored porcelain. The milling process begins and minutes later a natural looking dental restoration is complete, and is then fitted onto the prepared tooth - all in one appointment.
